Calculation of normal costs and liabilities

The method used to calculate the ERISA target normal cost and funding target, PBGC premium funding target and FAS 35 liabilities is the unit credit cost method.

Under this method, benefits are estimated at each decrement age using service and earnings as of the valuation date. The present value of these estimated benefits using the applicable ERISA or FAS 35 assumptions is the ERISA funding target or FAS 35 actuarial present value of accumulated plan benefits. The target normal cost is the present value of the benefits earned during the year.

For calculating the actuarial present value of vested benefits, including the PBGC premium funding target, benefits at each decrement age are determined in the same manner, but are then multiplied by each participant's vesting percentage as of the valuation date. The present value of these estimated vested benefits is determined without recognition of any benefit for which a participant will become entitled only through the advancement in service or age while actively employed. In addition, the following ancillary benefits have been treated as vested: disability and temporary supplemental retirement benefits in pay status and death benefits.

The ERISA funding target for lump sum benefits is determined by valuing the annuity that corresponds to the distribution using special actuarial assumptions, as described under proposed Treasury regulations section 1.430(d). Under these special assumptions, for the period beginning with the annuity starting date, the current IRC section 417(e) applicable mortality table is substituted for the mortality table otherwise used.

Yield curve interest rates

The company has elected to use the 3-segment yield curve interest rates without applying the available phase-in from prior RPA '94 interest rate methodology to PPA interest rate methodology, using the August preceding the valuation date as the applicable lookback month.

Actuarial value of assets

The actuarial value of assets is used to calculate contribution requirements under ERISA and is equal to the market value of assets.

Definitions

Year of Service

A year of service is granted to an employee if the employee completes 1,000 hours of service in the first twelve month period of his employment. Subsequent years of service are counted on anniversaries of the employee's hire date.

Cash Balance Credits

The preliminary Cash Balance Credit is calculated by applying the following formula to the points for each participant: \$W multiplied by points in excess of 50, plus \$X multiplied by points in excess of 100, plus \$Y multiplied by points in excess of 150, plus \$Z multiplied by points in excess of 200. The amounts of \$W, \$X, \$Y and \$Z for the first eight groups listed in the plan document (List A, List B, List C, List D, List E, List F, List G and List H) are listed on the table below. Points for each participant are determined by multiplying each participant's proportionate ownership of the firm by 10,000.

	<u>List A</u>	<u>List B</u>	<u>List C</u>	<u>List D</u>	<u>List E</u>	<u>List F</u>	<u>List G</u>	<u>List H</u>
Tier W	\$50	\$100	\$200	\$300	\$400	\$675	\$1,500	\$500
Tier X	\$40	\$80	\$160	\$240	\$320	\$600	\$1,200	\$400
Tier Y	\$30	\$60	\$120	\$180	\$240	\$450	\$900	\$300
Tier Z	\$30	\$60	\$120	\$180	\$240	\$450	\$900	\$300

The preliminary Cash Balance Credit is \$1,000 for participants on List I and is \$2,500 for participants on List J.

The Cash Balance Credit is determined by multiplying the preliminary Cash Balance Credit by the applicable budget factor (either 100% or 0%), and will be limited to the Maximum Credit Amount.

The Maximum Credit Amount for any participant is equal to 5% of the actuarial present value of the IRC section 415(b) dollar limitation applicable to the participant for the Plan Year and based on the participant's age (computed in completed years) as of the last day of the Plan Year. The actuarial present value shall be determined using a 7% interest rate and the mortality table provided in Revenue Ruling 2001-62, rounded to the nearest \$500.

Interest Credits

As of the last day of each Plan Year, an Interest Credit based on the amount of the Cash Balance Account as of the first day of each Plan Year shall be credited to the Cash Balance Account of each participant prior to the crediting of any Cash Balance Credits for that Plan Year. The rate of interest used to determine the Interest Credit for the Plan Year shall be the 30-year Treasury securities rate in effect for the month of December immediately preceding the Plan Year.

Actuarial Equivalent

For purposes of converting the accrued benefit to a life annuity, the 30-year Treasury securities rate for December of the preceding Plan Year and the mortality table provided in Revenue Ruling 2001-62. For purposes of converting the accrued benefit to any other optional form of benefit, replace the 30-year Treasury securities rate with 5% interest.
