		2009	2008
	Net Increase (Decrease) in Value During Year	**Fair Value at End of Year**	**Fair Value at End of Year**

	2009	2008
	Fair Value at End of Year	**Fair Value at End of Year**
Cash	$ 2,862,964	$ 3,544,807

E. RISKS AND UNCERTAINTIES:

The actuarial present value of postretirement benefits obligations is reported on certain assumptions pertaining to interest rates, health care inflations rates, and employee demographics, all of which are subject to change. Due to uncertainties inherit in the estimations and assumptions process, it is at least reasonably possible that changes in these estimates and assumptions in the near term would be material to the financials statements.

F. TERMINATION OF THE PLAN

Under certain conditions, the plan may be terminated. Upon termination, the assets then remaining shall be subject to the applicable provisions of the plan then in effect and shall be used until exhausted to pay benefits to employees in the order of their entitlement.

G. FAIR VALUE MEASUREMENTS

Financial Accounting Standards Board (FASB) *Accounting Standards Codification* (ASC) 820, *Fair Value Measurements and Disclosures*, provides a framework for measuring fair value. That framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (level 1 measurements) and the lowest priority to unobservable inputs (level 3 measurements). The three levels of the fair value hierarchy under FASB ASC 820-10 are described as follows:

- Level 1 inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that the plan has the ability to access.
- Level 2 inputs to the valuation methodology includes the following:
  -Quoted prices for similar assets or liabilities in active markets
  -Quoted prices for identical or similar assets or liabilities in inactive markets
  -Inputs other than quoted prices that are observable for the asset or liability
  -Inputs that are derived principally from, or corroborated by, observable market data by correlation or other means
  If the asset or liability has a specified (contractual) term, the level 2 input must be observable for substantially the full term of the asset or liability.
- Level 3 inputs to the valuation methodology are unobservable and significant to the fair value measurement.

The assets or liability's fair market value measurement level within the fair value hierarchy is based on the lowest level of any input tat is significant to the fair value measurement. Valuation techniques used need to maximize the use of observable inputs and minimize the use of unobservable inputs.

Following is a description of the valuation methodologies used for assets measured at fair value. There have been no changes in the methodologies used at December 31 2009, and 2008.

The plan's investments soncisit of shares of a money market portfolio that is valued using amortized cost, which approximates fair value.

The preceding methods may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, although the plan believes its valuation methods are appropriate and consistent with other market participants the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.
