Statement by Enrolled Actuary

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

II. Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Traditional Unit Credit

The actuarial cost method used in the valuation was the traditional unit credit cost method.

The normal cost is the sum of all the individual normal costs for each participant. For active participants, the individual normal cost is the present value of the benefit earned during the year being valued. The normal cost is zero for active participants whose credited service equals or exceeds the plan maximum, and for non-active participants.

The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability for an active participant is the present value of the accrued benefit as of the valuation date. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded liability is the actuarial accrued liability less the valuation assets.

The total annual cost of the plan is the normal cost plus an amount to amortize the shortfall amount.

Projected Unit Credit

The actuarial cost method used in the development of the maximum contribution and the at-risk liabilities, if applicable, was projected unit credit cost method.

Under this method, the normal cost is the sum of the individual normal costs for all participants. For an active participant, the individual normal cost is the present value at the current age of the projected benefit at the assumed retirement age, based on the actuarial assumptions, divided by the participant's expected years of credited service at that age. For a non-active participant, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. For an active participant, the individual accrued liability is the product of the normal cost and the total years of credited service at the current age. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded actuarial accrued liability equals the actuarial accrued liability less the valuation assets.

Asset Valuation Method:

The actuarial value of the assets is determined by using the average value of the fair market value of the plan's assets at the valuation date over a 24 month period adjusted for contributions, distributions, expected earnings, and includes contributions receivable discounted to the plan year end. The asset value determined under this method is adjusted to be no greater than 110% and no less than 90% of the fair market value of assets.

Participants included in valuation:

All employees who are eligible to participate as of the valuation date, plus retirees, beneficiaries and terminated participants entitled to current or future benefits.

II. Schedule SB, Part V – Statement of Plan Provisions

History

The plan became effective on January 1, 1968. It originally included employees at High Point and Granite Falls locations. As of December 31, 1987, all Granite Falls employees were terminated and as of December 31, 1993, all High Point employees were terminated.

Eligibility

All hourly wage rate employees of the High Point, North Carolina location enter the plan on the first of the month coincident with or next following the completion of one year of service. There are no employees eligible to enter the plan. Participation is frozen.

Credited Service

Years and months of employment from date of hire. Maximum benefit credit is 40 years of service.

Vesting Service

A year of service is earned if at least 1,000 hours of service are worked during the plan year.

Normal Retirement

Eligibility

Age 65 or 5 years of participation

Amount of Benefit

The monthly benefit is the effective rate multiplied by credited service. Negotiated changes to the plan are the following:

<u>Effective Date</u>	<u>Rate</u>
May 1, 1987	\$ 9.00
March 1, 1988	\$10.00
March 1, 1991	\$11.00

Early Retirement

Eligibility

Attainment of age 60 and 10 years of vesting service.

Amount of Benefit

Accrued benefit is reduced ½% for each month early retirement precedes the participant's 65th birthday.

II. Schedule SB, Part V – statement of Plan Provisions (Continued)

Disability Benefit:

Eligibility

5 years of vesting service and 6 months of permanent and total disability.

Amount of Benefit

Accrued benefit as of the date of disability. Since there are no active employees in the plan, this benefit is limited to those that are in pay status.

Pre-retirement Death Benefit

Eligibility

5 years of vesting service

Amount of Benefit

One-half of the benefit that would have been paid if the participant had retired the day before he died under the joint and survivor option. Benefits are paid immediately or at the participant's early retirement age, if later.

Vesting

Eligibility

5 years of vesting service.

Amount of Benefit

Accrued benefit payable at normal retirement date or in a reduced amount at early retirement date.

Normal Form of Payment

If married, benefits are paid in the form of a joint and survivor annuity. If not married, benefits are payable for the life of the participant with 10 years certain.

Optional Forms of Payment

The plan provides the following optional forms of payment: Life annuity, Joint and Survivor annuities (50%, 66 2/3%, 75%, or 100%), and period certain and life annuities (5-year, 10-year, or 15-year).

Assumptions for Optional Forms of Payment

Optional forms of payment are actuarially equivalent to the normal form of payment for single participants, i.e. the life annuity with 10 years certain and continuous option. The conversion factors are calculated using the lump sum assumptions, which are based on the IRS 2009 Lump Sum Mortality Table and the segment rates published for March, 2008 (4.46% / 5.20% / 5.32%).

Contributions

The employer pays the total cost of the plan.

II. Schedule SB, Part V – Assumptions Used to Determine Funding Target and Target Normal Cost

Schedule SB, Line 25 – Method Change

The Plan Sponsor has elected to use the full yield curve for the month of April, 2009 to determine the plan liabilities. The asset valuation method has also been changed from market value to the two-year asset smoothing method.

The IRS granted automatic approval for changes in interest-rate method and asset method for 2009.

II. Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Traditional Unit Credit

The actuarial cost method used in the valuation was the traditional unit credit cost method.

The normal cost is the sum of all the individual normal costs for each participant. For active participants, the individual normal cost is the present value of the benefit earned during the year being valued. The normal cost is zero for active participants whose credited service equals or exceeds the plan maximum, and for non-active participants.

The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability for an active participant is the present value of the accrued benefit as of the valuation date. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded liability is the actuarial accrued liability less the valuation assets.

The total annual cost of the plan is the normal cost plus an amount to amortize the shortfall amount.

Projected Unit Credit

The actuarial cost method used in the development of the maximum contribution and the at-risk liabilities, if applicable, was projected unit credit cost method.

Under this method, the normal cost is the sum of the individual normal costs for all participants. For an active participant, the individual normal cost is the present value at the current age of the projected benefit at the assumed retirement age, based on the actuarial assumptions, divided by the participant's expected years of credited service at that age. For a non-active participant, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. For an active participant, the individual accrued liability is the product of the normal cost and the total years of credited service at the current age. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded actuarial accrued liability equals the actuarial accrued liability less the valuation assets.

Asset Valuation Method:

The actuarial value of the assets is determined by using the average value of the fair market value of the plan's assets at the valuation date over a 24 month period adjusted for contributions, distributions, expected earnings, and includes contributions receivable discounted to the plan year end. The asset value determined under this method is adjusted to be no greater than 110% and no less than 90% of the fair market value of assets.

Participants included in valuation:

All employees who are eligible to participate as of the valuation date, plus retirees, beneficiaries and terminated participants entitled to current or future benefits.

II. Schedule SB, Part V – Statement of Actuarial Assumptions / Methods (Continued)

Discount Rates: The full yield curve published for April, 2009. Additionally, the Plan's effective rate, based upon the yield curve, is 6.85% for 2009.

Yield curve rates for selected years are as follows:

<u>Year</u>	<u>Rate</u>	<u>Year</u>	<u>Rate</u>	<u>Year</u>	<u>Rate</u>
1	4.03%	6	6.48%	15	7.35%
2	4.85	7	6.72	20	7.21
3	5.43	8	6.92	25	7.07
4	5.85	9	7.08	30	6.98
5	6.20	10	7.19	35	6.93

Expected Rate of Return on Plan Assets: The expected return assumption is the applicable 3rd segment rate as detailed in Notice 2009-22 (6.80% for 2009).

Mortality: Optional combined table of RP-2000 static annuitant and non-annuitant tables, projected from 2008 for PPA funding.

Sample RP-2000 rates are as follows:

<u>Age</u>	<u>Male</u>	<u>Female</u>	<u>Age</u>	<u>Male</u>	<u>Female</u>
20	0.000222	0.000132	60	0.005095	0.004617

Retirement age: The later of age 65 and 5 years participation

Turnover: None assumed

Incidence of disability: None assumed

Expenses: \$6,877

Frequency of Optional Forms of Payment: 100% of participants are assumed to elect the life annuity with 10 years certain option upon retirement

II. Schedule SB, Part V – Statement of Plan Provisions

History

The plan became effective on January 1, 1968. It originally included employees at High Point and Granite Falls locations. As of December 31, 1987, all Granite Falls employees were terminated and as of December 31, 1993, all High Point employees were terminated.

Eligibility

All hourly wage rate employees of the High Point, North Carolina location enter the plan on the first of the month coincident with or next following the completion of one year of service. There are no employees eligible to enter the plan. Participation is frozen.

Credited Service

Years and months of employment from date of hire. Maximum benefit credit is 40 years of service.

Vesting Service

A year of service is earned if at least 1,000 hours of service are worked during the plan year.
