** The discount segment rates and mortality assumptions are prescribed by the IRC and IRS Regulations.

ACTUARIAL ASSUMPTIONS (continued)**Actuarial Methods**Actuarial Cost Method

The actuarial cost method used to determine the actuarial target liability and target normal cost is the Unit Credit Actuarial Cost Method, as required under IRC Section 430.

Asset Valuation Method

Market value of all Trust Investments, plus any accrued but unpaid contributions to the Trust discounted to the Valuation Date.

Other Facts Relevant To The Valuation Of This PlanEmployee Data

An employee census as of the Valuation Date was supplied by the Company and included all employees in the Eligible Class. We did not audit the census.

Asset Data

Asset data as of the Valuation Date and contribution amounts and dates were supplied by the Company. We did not audit the asset data.

Changes in Actuarial Assumption or Methods

The valuation interest rates are the rates required per IRC Section 430, and the cash balance interest credit rate is the 30-year treasury rate for the third full month immediately preceding the first month of the Plan Year. This year the credit rate is 4.19% compared to 4.17% last year.

The mortality assumptions used are those mandated by the Internal Revenue Service for this valuation, per IRC Section 430. Since this plan has fewer than 500 participants, we use the unisex assumptions.

Events and Trends Which Have Not Been Taken Into Account

To the best of our knowledge, there has been no event or trend which has not been taken into account and which may require a material change in plan costs or required contribution rates. The Plan amendment adopted December 13, 2010 to continue benefit accruals for the 2010 Plan Year and to change the definition of Actuarial Equivalence was considered for this Valuation.
