Actuarial Cost Method

Annual costs were calculated using the Traditional Unit Credit Actuarial Cost Method as required by the Pension Protection Act of 2006. The Traditional Unit Credit Method is one of the Accrued Benefit Actuarial Cost Methods.

The target normal cost for each year is defined as the actuarial present value of retirement and ancillary benefits that are earned in the current year.

The funding target is defined as the actuarial present value of retirement and ancillary benefits that have been earned in years of service prior to the current year.

Asset Valuation Method

The value of plan assets is based on the two-year average of the expected market values of assets as described under IRS Notice 2009-22. These expected values are based on the two years prior effective rates of interest and cannot be less than 90% nor more than 110% of the market value of assets.

Contributions for the prior plan year made after the end of the plan year are included in the current year's market value of assets at their discounted value, based on the prior year's effective interest rate.
