Schedule SB, Part V – Statement of Actuarial Assumptions and Methods

Asset valuation method

The Actuarial Value of Assets is determined using a method that spreads asset gains/(losses) over 2 years. The gain/(loss) for each period is determined as the actual return during the period less the expected return based on an assumed earnings rate chosen by the actuary but required by PPA to be not greater than the applicable third segment rate. The resulting value is constrained to be within a corridor of 90% to 110% of market value. The discounted value of accrued contributions, if any, is included in the Actuarial Value of Assets.

The expected return on plan assets is 9.00% per annum, limited by PPA to the applicable Third Segment Rate as follows:

2009 measurement period:	6.69%
2008 measurement period:	6.43%

EIN/PN: 36-3193091 / 053

Schedule SB, Part V – Statement of Actuarial Assumptions and Methods

Asset valuation method

The Actuarial Value of Assets is determined using a method that spreads asset gains/(losses) over 2 years. The gain/(loss) for each period is determined as the actual return during the period less the expected return based on an assumed earnings rate chosen by the actuary but required by PPA to be not greater than the applicable third segment rate. The resulting value is constrained to be within a corridor of 90% to 110% of market value. The discounted value of accrued contributions, if any, is included in the Actuarial Value of Assets.

The expected return on plan assets is 9.00% per annum, limited by PPA to the applicable Third Segment Rate as follows:

2009 measurement period:	6.69%
2008 measurement period:	6.43%
