Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
 RETIREMENT INCOME PLAN FOR EES OF AVDEL CORP, SYSTEMS DIV, REP BY LOCAL 417
 EIN 22-1615390 Plan No. 002

Assumptions Prescribed by Law	
Mortality	<p><u>During Benefit Payment Period</u> IRS Prescribed Mortality-Optional Combined Table for Small Plans, male and female.</p> <p><u>Before Benefit Payment Period</u> IRS Prescribed Mortality-Optional Combined Table for Small Plans, male and female.</p>
Assumptions Selected by Actuary	
Retirement Age	Normal Retirement Age as defined in Plan Provisions
Expected Expense	\$19,000 included in Target Normal Cost.
Disability	None.
Marriage	75% married; husbands are 3 years older than wives.
Withdrawal	None
Form of Benefit	Participants are assumed to receive their benefits on the normal form at the assumed retirement age.
Methods Prescribed by Law	
Liability Measure	Funding target is the present value of the benefits accrued on the valuation date. Target Normal Cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.

Methods Selected by Plan Sponsor	
Asset Measure	<p>The asset valuation method is prescribed by law for plans that elect to use a value other than market value.</p> <p>For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.</p> <p>The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the Maximum Allowable Rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.</p> <p>When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.</p>
Segment Rates	24 month average with no weighting to prior law basis. Use rates where November is the last month included in the average.
PBGC Premium Basis	Premiums are calculated using the special segment rates (no 24-month averaging) in effect on the valuation date.
Methods Elected by Actuary	
Retirees	Assets and liabilities for current and future retirees are included.
HCE Benefit Payment Restrictions	<p>A ratio of the market value of assets and funding target is used to determine if restrictions apply. Assets and Funding Target are as of the valuation date and are reduced by:</p> <ul style="list-style-type: none"> • any retiree benefit index or floor • amounts for HCEs who were previously restricted • an amount for the retiring HCE
Vested Benefits	<p>A benefit is included in vested benefits when the participant will meet age and service eligibility requirements at the valuation date. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.</p> <p>The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, and pre-retirement death benefits in excess of the Survivor Annuity Death Benefit except as noted in the Plan Provisions.</p>

Assumptions and Methods Elected by Actuary Long-Term Contribution Level and Plan Accounting (formerly known as SFAS No. 35)	
With the exceptions below, all assumptions and methods are the same as those used in determining your plan's regular Funding Target and Target Normal Cost.	
Interest Rate Used to Value Liabilities	6.50%
Benefit Liability	Long-Term Contribution Level reflects: <ul style="list-style-type: none"> • Service projected to the age benefits are assumed to be paid. • Benefit limits projected at 3.00% per year.
Long-Term Contribution Level	Allocates the difference between the Benefit Liability and the Actuarial Value of Assets as a level dollar amount per year.
