Small Plan Financial Information

Report below the current value of assets and liabilities, income, expenses, transfers and changes in net assets during the plan year. Combine the value of plan assets held in more than one trust. Do not enter the value of the portion of an insurance contract that guarantees during this plan year to pay a specific dollar benefit at a future date. Include all income and expenses of the plan including any trust(s) or separately maintained fund(s) and any payments/receipts to/from insurance carriers. Round off amounts to the nearest dollar.

If a Participant satisfies the requirements for a Disability Retirement Benefit and also satisfies the requirements for a Vested Accrued Benefit, the portion of his Disability Retirement Benefit which is the Actuarial Equivalent of his Vested Accrued Benefit will be payable in the Normal Benefit Form (or any optional benefit form) and will be subject to the joint and survivor annuity distribution requirements. The remaining portion, if any, of the Actuarial Equivalent of the Participant's Disability Retirement Benefit will be payable as a Lifetime Pension with a monthly benefit payable for the Participant's lifetime with payments terminating upon his death.

## **7. Optional Benefit Forms**

### **Schedule SB, Part V – Statement of Actuarial Assumptions / Methods**

The true cost of a pension plan will ultimately be determined by the excess of benefits actually paid and the expenses incurred in its administration over investment income earned on monies set aside for its funding. Thus, the ultimate cost of a plan cannot be known until the last payment has been made to its last participant. The actuarial cost method is the technique adopted by the actuary for establishing the amount and incidence of annual actuarial costs. The actuarial cost method determines the portion of the ultimate cost of a pension plan which should be allocated to each plan year (known as the normal cost). The cost method is thus a budgeting tool which helps to ensure that the pension plan will be adequately and systematically funded.

In accordance with the Pension Protection Act of 2006 (PPA), the actuarial cost method used in the valuation of this Plan is known as the **unit credit cost method**. Under this cost method a projected retirement benefit at assumed retirement age is computed for each participant using one year's service increase. The Target Normal Cost for each participant is computed as the present value of the pro-rata portion of the participant's projected benefit which is accrued or earned during the plan year being valued. The Target Normal Cost for the plan is the total of the individually computed Target Normal Costs for all participants including the costs for any death or disability benefits under the plan.

The Funding Target at any point in time for an active participant is the present value of the benefit which has been accrued up to the valuation date. For persons receiving benefits or entitled to a deferred vested retirement income, the Funding Target is equal to the present value of their future benefit payments. The Funding Target for the plan is the total of the individually computed Funding Target amounts for all participants. The Funding Shortfall for the plan is the excess of the Funding Target over the assets less the carryover and prefunding balances. The shortfall amortization installment is the payment that will amortize the Shortfall Amortization Base in level annual installments over a seven year period.

The funding cost of the Plan is derived by making certain specific assumptions as to rates of interest, mortality, turnover, etc. which are assumed to hold for many years into the future. Since actual experience may differ somewhat from the assumptions, the costs determined by the valuation must be regarded as estimates of the true costs of the Plan.

The Actuarial Value of Assets is developed based on the market value of assets plus receivables.
