SCHEDULE SB, PART V
STATEMENT OF ACTUARIAL ASSUMPTIONS/METHODS

Method for Contributions

Contributions required to fund the plan benefits are determined according to the provisions of the Pension Protection Act. The Target Normal Cost is the present value of benefits earned during the plan year. The Funding Target is the present value of benefits earned as of the beginning of the plan year. The excess of the Funding Target over the actuarial value of assets represents the Funding Shortfall.

Method for Accrued Benefits

The actuarial present value of accumulated plan benefits is a measure of plan benefits which have been earned to date. This is not only a valuation of retirement benefits, but also of deferred vested, death, and disability benefits. Earnings and service for benefit purposes expected to be earned after the valuation date are excluded from this value.

The actuarial assumptions used to determine this value is identical to those used for the funding purposes with the exception that interest is assumed to equal 8.0%.

Method of Asset Valuation

The asset valuation method is the "smoothed market value" method, using a smoothing period as described in sec. 430(g)(3)(B) of the Internal Revenue Code. Under this method, the actuarial value of assets is equal to the average of the fair market value of assets on the valuation date and the adjusted fair market value of assets determined from the two immediately preceding valuation dates. The adjusted fair market value of assets is the fair market value of assets at the applicable valuation date adjusted with contributions, distributions and expected earnings to the current valuation date as specified by the Secretary of Treasury. Expected earnings will be determined using the applicable third segment rate.

In general, the actuarial value of assets must fall between 90% and 110% of the market value of assets.

Data

The valuation results are based upon participant census and financial data provided by the plan sponsor. The data was tested for reasonableness and consistency with the prior valuation.

Actuarial Assumptions

The following actuarial assumptions were employed in the determination of the liabilities and annual contributions of the plan as developed in accordance with the funding methods described in this report.

1. The rates of mortality will be in accordance with the Static Mortality Table for males and females.

2. The interest rates used for the valuation of benefits are the 24-month average corporate bond segment rates for June 2010 as published by the IRS. The Effective Interest Rate is 6.62%.

3. The rates of withdrawal are based on the scale T-4 from the actuary's pension handbook; rates for sample ages are shown in the following table:

Attained Age	Percentage Assumed to Withdraw Per Year
25	5.3%
30	5.1%
35	4.7%
40	4.2%
45	3.5%
50	2.5%
55	0.9%
60	0.1%
65	0.0%

4. Retirement will occur at the later of age 65 or 5 years of service.

5. All plan participants have been included in the funding.

6. As required by Section 415 of the Internal Revenue Code, the determination of a participant's projected retirement benefit has been limited so that the amount does not exceed $195,000 per year adjusted if necessary to recognize the participant's assumed retirement age, cost of living adjustments on the valuation date and optional forms of payment.

7. The rates of disability are assumed in accordance with the Sarason United Auto Workers 1955 Table.

8. The rates of mortality for disabled lives are based on the Disability Mortality Table per Revenue Ruling 96-7.

9. Cost calculations for surviving spouse's benefits assume that 85% of the active participants are married and that the wife is three years younger than the husband.
