Assumptions Made In Valuing Spouse's Benefit

Eighty-five percent of the male and fifty percent of the female employees included in the valuation are assumed to be married. These percentages are used as the probabilities that survivor benefits will be payable due to preretirement deaths. The wife is assumed to be three years younger than the husband.

Optional Form Election

All employees are assumed to elect the normal form of payment.

Provision for Expenses

The expected administrative (i.e. non-investment) expenses, if any, that will be paid from plan assets, which were assumed to equal actual expenses during the prior year, were included in the Target Normal Cost for minimum contribution purposes.

Asset Method

Funding: Market Value of Assets plus interest-adjustment accrued but unpaid contributions as of the valuation date, plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). Contributions made after the end of the prior plan year will be discounted for interest at the prior year's effective rate.

Employees Valued

Only participants as of the valuation date were valued.
