Schedule SB, Part V – Statement of Actuarial Assumptions / Methods**Actuarial assumptions**

The actuarial assumptions used in the valuation of the Restated Contributory and Noncontributory Plans are shown below. The assumptions used were the same as the assumptions used in the April 1, 2011 valuation, except as noted below.

InterestFunding

All plan sponsors have elected to use segmented rates with no lookback. These rates were 2.51%, 5.59% and 6.38%. (For 2010, these rates were 4.35%, 6.59% and 6.72%.)

ASC 960

8.00% per annum for all groups.

Expenses

Administrative related expenses (actuarial fees, PBGC premiums, and trustee fees) assumed to be 0.35% of assets.

Mortality

Section 430(h)(3) prescribed separate static annuitant and nonannuitant tables for the valuation year. These tables are based on the RP 2000 mortality tables projected with mortality improvement to the valuation year plus 7 and 15 years based on Scale AA.

Turnover

Based on select rates of turnover for the first four years of service and ultimate rates thereafter. Sample rates are shown on the following page.

Disability

None assumed.

Expected Return
on Plan Assets

8.00% per annum

Schedule SB, Part V – Statement of Actuarial Assumptions / MethodsIncidence of retirement

Employees eligible for the special Rule-of-85 benefit are assumed to retire according to the select rates shown below for the first year after becoming eligible. The ultimate rates apply to Rule-of-85 retirements after the first year since becoming eligible and other retirements. The first year rates will not start before age 55 even if the Rule-of-85 applies earlier, nor will they ever fall below the ultimate rate for that age.

For frozen groups 177 and 201, same assumptions until eligible for unreduced retirement, but then 100% at unreduced retirement age.

Spouse's benefit

80% of all employees are assumed married with husbands two years older than their wives.

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Actuarial methods

Asset valuation method

The asset valuation method is an average of the adjusted market value for each year during the last 2 years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110 percent and no less than 90 percent of the fair market value, as defined in IRC Section 430. Contributions made after April 1, 2011 have not been reflected in these initial results.

A characteristic of this asset method is that over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

Participant methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** Associated Benefits Corporation provides us with data on only those employees who have completed the eligibility requirements so only participants are included in the valuation of the liabilities.
- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date.
- **Insurance contracts:** The plan does not have any insurance contracts.
- **Transferred participants:** The liabilities for benefits earned prior to their transfer by employees who have transferred to another Associated Benefits Corporation employer have been included with the liabilities for terminated vested participants at their former employer.

Actuarial cost method

Minimum funding method

Target liability for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.

Maximum deductible contribution method

The maximum deductible contribution is the greatest of (a) the minimum required contribution, (b) the funding target plus target normal cost plus cushion amount minus the actuarial value of assets, and (c) the plan's at-risk funding target plus at-risk target normal cost minus the actuarial value of assets (if the plan is not-at-risk). The cushion amount is 50 percent of the funding target.
