Actuarial Cost Method

I. ACTUARIAL COST METHOD

Costs have been computed in accordance with the Unit Credit Actuarial Cost Method and reflect the actuarial assumptions described in “Plan Assumptions” of this report as provided under the applicable regulations of the Pension Protection Act of 2006.

Target Normal Cost

The Target Normal Cost is the present value of benefits expected to accrue during the plan year for all participants, plus an estimate of the expenses to be paid from the plan assets during the plan year.

Target Liability and Funding Shortfall

As of January 1, 2008, a Target Liability is established which represents the present value of accrued benefits. This Target Liability is offset by adjusted assets, and the remainder (i.e. Funding Shortfall), if any, is amortized over seven years.

Subsequent changes in the Funding Shortfall due to asset experience, liability experience, plan amendments, and/or actuarial assumption changes will be amortized over a seven year period from their valuation dates.

Discount Rate

The plan sponsor has elected to use the Segment Rate approach for discount rate purposes, with an applicable month that is 3 months prior to the valuation date.

In addition, beginning with the 2012 plan year, solely for purposes of determining the minimum required contribution level, applicability of benefit restrictions, and for the at-risk determination, the adjusted 24-month average segment rates established by MAP-21 have been incorporated.

The adjusted 24-month average segment rates are generated by taking the unadjusted 24-month average segment rates for the sponsor-chosen lookback month and adjusting them so that each individual segment rate is not outside of the stipulated corridor around the corresponding 25-year average segment rate for the given plan year. For the 2012 plan year, the stipulated corridor is 90% - 110% of these 25-year average segment rates.

II. ASSET VALUATION METHOD

Assets have been valued in accordance with generally accepted procedures as described below.

Funds invested in the General Accounts
of an insurance company.

Stated contract value of funds.

Funds invested in insurance company
Separate Accounts.

Market Value.

Actuarial Assumptions

Assumptions have been chosen to anticipate the long range experience of the Plan. Consistency among assumptions is important as each interacts with the others; equally important is the recognition of inflationary trends in the economy.

As the Enrolled Actuary for the Plan, I will certify to the reasonableness of these assumptions, in aggregate, as required by ERISA.

The actuarial assumptions used to compute Plan costs are:

Mortality:

<i>Male:</i>	The IRS 2012 Static Mortality Table (male)
<i>Female:</i>	The IRS 2012 Static Mortality Table (female)

Investment Return:

For ASC 960 purposes:
5.63% per annum, compounded annually, net of investment and contract fees.

For minimum required contribution level, applicability of benefit restrictions, and at risk determination only:
Segment Rates with a 3 month lookback, as adjusted by the 90%-110% corridor around the 25-year average segment rates (5.54%, 6.85%, and 7.52% for the 2012 plan year)

For all other purposes:
Segment Rates with a 3 month lookback, unadjusted (2.03%, 5.20%, and 6.30% for the 2012 plan year)

Termination:

The probabilities that Participants at the ages indicated will terminate before reaching the assumed retirement age are:

<u>Age</u>	<u>Male</u>	<u>Female</u>
25	9.83%	9.83%
30	7.90%	7.90%
