ACTUARIAL ASSUMPTIONS (continued)

Actuarial Methods

Actuarial Cost Method	The actuarial cost method used to determine the actuarial Target Liability and Target Normal cost is the Unit Credit Actuarial Cost Method, as required under IRC Section 430. The actuarial valuation date is the last day of the plan year.
Asset Valuation Method	Market value of all Trust Investments, plus any accrued but unpaid contributions to the Trust discounted to the Valuation Date.

Other Facts Relevant To The Valuation Of This Plan

Employee Data	An employee census as of the Valuation Date was supplied by the Company and included all employees in the Eligible Class. We did not audit the census.
Asset Data	Asset data as of the Valuation Date and contribution amounts and dates were supplied by the Company. We did not audit the asset data.
Changes in Actuarial Assumption or Methods	The valuation interest rates are the rates required per IRC Section 430, and the cash balance interest credit rate is the 30-year treasury rate for the third full month immediately preceding the first month of the Plan Year. This year the credit rate is 3.13% compared to 3.87% last year. The plan is receiving funding relief provided by MAP-21 since no election was made to use the PPA segment rates for 2012. The mortality assumptions used are those mandated by the Internal Revenue Service for this valuation, per IRC Section 430. Since this plan has fewer than 500 participants, we use the unisex assumptions.
Events and Trends Which Have Not Been Taken Into Account	To the best of our knowledge, there has been no event or trend which has not been taken into account and which may require a material change in plan costs or required contribution rates. In addition, no Plan amendments adopted and effective after the valuation date of December 31, 2012 were considered for this Valuation, nor do any exist of which we are aware except statutory CPI increases in maximum benefits and considered compensation.
