Schedule SB, Part V - Statement of Actuarial Assumptions/Methods ELIAS MALLOUK REALTY CORPORATION RETIREMENT PLAN EIN 11-1503269 Plan No. 001

	Assumptions Prescribed by Law
Mortality	During Benefit Payment Period IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.
	Before Benefit Payment Period None.
	Assumptions Selected by Actuary
Asset Return	5.00% for the current plan year.
Expected Expense	\$11,216 included in Target Normal Cost.
Retirement Age	Normal Retirement Age as defined in <u>Plan Provisions</u>
Upcoming Year Salary Increase	The preceding year's salary is increased using the S-5 Table from The Actuary's Pension Handbook, increased by 2.00% at each age. This table provides a rate of increase that declines as participants age.
	Note: not used for Plan Accounting calculations.AgeUpcoming Increase256.18%404.72%553.88%
Disability	None.
Marriage	75% married; husbands are 3 years older than wives.
Withdrawal	None.
Compensation Limit Increase	2.25% increase per year used in the calculation of the IRC 404 Maximum Deduction cushion. See <u>Calculated Deduction</u> in Rules and Regulations.
Form of Benefit	Participants are assumed to receive their benefits on the normal form at the assumed retirement age.
	Methods Prescribed by Law
Liability Measure	Funding target is the present value of the benefits accrued on the valuation date. Target Normal Cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.

	Methods Selected by Plan Sponsor
Asset Method	The asset valuation method is prescribed by law for plans that elect to use a value other than market value.
	For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.
	The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the Maximum Allowable Rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.
	When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.
Segment Rates	24 month average with no weighting to prior law basis. Use rates where April is the last month included in the average.
PBGC Premium Basis	Premiums are calculated using the funding segment rates used for the plan year without the MAP-21 interest rate corridor defined in IRC §430(h)(2)(C)(iv). This method was elected with the 09/01/2010 plan year and must continue for five years before a change can be made.
	Methods Elected by Actuary
Retirees	Assets and liabilities for current and future retirees are included.
HCE Benefit Payment Restrictions	A ratio of the market value of assets and funding target is used to determine if restrictions apply. Assets and Funding Target are as of the valuation date and are reduced by:
	any retiree benefit index or floor
	 amounts for HCEs who were previously restricted
	• an amount for the retiring HCE
	The Funding Target is not based on the MAP-21 interest rate corridor defined in IRC §430(h)(2)(C)(iv). Other assumptions or methods may be used.
Vested Benefits	A benefit is included in vested benefits when the participant will meet age and service eligibility requirements at the valuation date. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.
	The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, and pre- retirement death benefits in excess of the Survivor Annuity Death
