Axia Inc. Hourly Employees' Retirement Plan

EIN / PN: 27-1120278\002

Attachment to 2013 Schedule SB (Form 5500)

Line 22 - Description of Weighted Average Retirement Age

The Plan assumes that 100% of participants will retire at age 65.

Actuarial Cost Method

I. ACTUARIAL COST METHOD

Costs have been computed in accordance with the Unit Credit Actuarial Cost Method and reflect the actuarial assumptions described in “Plan Assumptions” of this report as provided under the applicable regulations of the Pension Protection Act of 2006.

Target Normal Cost

The Target Normal Cost is the present value of benefits expected to accrue during the plan year for all Participants plus an estimate of the expenses to be paid from the plan assets during the plan year.

Target Liability and Funding Shortfall

As of January 1, 2008, a Target Liability is established which represents the present value of accrued benefits. This Target Liability is offset by adjusted assets, and the remainder (i.e. Funding Shortfall), if any, is amortized over seven years.

Subsequent changes in the Funding Shortfall due to asset experience, liability experience, plan amendments, and/or actuarial assumption changes will be amortized over a seven year period from their valuation dates.

Discount Rate

The plan sponsor has elected to use the Segment Rate approach for discount rate purposes, with an applicable month that is 4 months prior to the valuation date.

In addition, beginning with the 2012 plan year, solely for purposes of determining the minimum required contribution level, applicability of benefit restrictions, and for the at-risk determination, the adjusted 24-month average segment rates established by MAP-21 have been incorporated.

The adjusted 24-month average segment rates are generated by taking the unadjusted 24-month average segment rates for the sponsor-chosen lookback month and adjusting them so that each individual segment rate is not outside of the stipulated corridor around the corresponding 25-year average segment rate for the given plan year. For the 2013 plan year, the stipulated corridor is 85% - 115% of these 25-year average segment rates.

II. ASSET VALUATION METHOD

Assets have been valued in accordance with generally accepted procedures as described below.

All funds invested are valued in the following manner:

Definitions

i(t)	assumed growth rate, set equal to the lesser of the expected return on assets or the applicable 3 rd segment rate for Plan Year t.
C(t)	sum of contributions and other additions to the fund from all sources other than investment transactions in Plan Year t
W(t)	sum of all withdrawals and other decreases to the fund from all sources other than investment transactions in Plan Year t
AV(t)	Actuarial Value of Assets as of Plan Year t
MV(t)	Market Value of Assets as of Plan Year t

Actuarial Cost Method

EV(t) Expected Value of Assets as of Plan Year t

G/L(t) Gain or Loss for Plan Year t

Method

A description of the method used to determine the current year's Actuarial Value of Assets {AV(t)} is below.

For the preceding 2 years, G/L(t) is determined as follows:

$$EV(t) = MV(t-1) * (1 + i(t-1)) + [C(t-1) - W(t-1)] * (1 + i(t-1) * m)$$

Where m represents a proportionate yield consistent with the portion of the year for which C and W are invested

$$G/L(t-1) = EV(t) - MV(t)$$

For the current year, AV(t) is determined as follows:

$$AV(t) = MV(t) + 2/3 * G/L(t-1) + 1/3 * G/L(t-2)$$

Corridor Limits

The Actuarial Value of Assets may not be less than 90% or more than 110% of the current market value of plan assets as of the applicable valuation date [as required by IRC Section 430(g)(3)(B)(iii)]

Please note, as highlighted above, the assumed asset growth rate for each year is limited to the applicable 3rd segment rate by law. As a result, if the plan's expected rate of return is greater than this applicable rate, this method is expected to produce an actuarial value of assets that can be expected to be slightly less than the market value of assets, on average.

The market value of the Guaranteed Deposit Account is an estimate only and not the result of the precise calculation which would be done at contract discontinuance or to measure the impact of excess withdrawals in any calendar year. It does not constitute an offer by Prudential or a final experience adjustment. Please be sure that anyone to whom you quote this value receives this explanation.

Actuarial Assumptions

Assumptions have been chosen to anticipate the long range experience of the Plan. Consistency among assumptions is important as each interacts with the others; equally important is the recognition of inflationary trends in the economy.

As the Enrolled Actuary for the Plan, I certify to the reasonableness of these assumptions, in aggregate, as required by ERISA.

The actuarial assumptions used to compute Plan costs are:

Investment Return:

For ASC 960 purposes:

7.00% per annum, compounded annually, net of investment and contract fees.

For minimum required contribution level, applicability of benefit restrictions, and at risk determination only:

Segment Rates with a 4 month lookback, as adjusted by the 85%-115% corridor around the 25-year average segment rates (4.94%, 6.15%, and 6.76% for the 2013 plan year)

For all other purposes:

Segment Rates with a 4 month lookback, unadjusted (1.75%, 4.62%, and 5.72% for the 2013 plan year)

Expected Return on Plan Assets

8.00%

Estimated Expenses:

An estimate of the administrative expenses expected to be paid from plan assets. For 2013 this amount is \$23,000.

Mortality:

The 2013 IRS Static Mortality Table.

Termination:

There are only inactive participants.

Disability:

There are only inactive participants.

Retirement Rates:

There are only inactive participants. Terminated Vested Participants are assumed to retire at age 65.

Survivor's Benefit:

It is assumed that husbands are 5 years older than wives and that 80% of the Participants who are or will become eligible for coverage under the Survivor's Benefit will be survived by an eligible survivor.

Preretirement Spouse Benefit	<p>Each married participant and former employee who is entitled to a deferred vested benefit is automatically covered by the Pre-retirement Survivor Annuity Coverage unless such coverage is waived with a signed spousal consent. If coverage is not waived and the employee dies, the spouse is entitled to a surviving spouse pension equal to the amount to which the surviving spouse would have been entitled if the participant's commencement date had been the day before his death, or age 55 if later, and his accrued pension had been payable in the form of a 50% Joint and Survivor Annuity.</p> <p>The Pension is reduced 7/10th of 1% for each full year prior to age 65 that the coverage is in effect. This reduction is also taken into account when computing the spouse's benefit.</p>

Attachment to 2013 Schedule SB (Form 5500)

Line 22 - Description of Weighted Average Retirement Age

The Plan assumes that 100% of participants will retire at age 65.

Actuarial Cost Method

I. ACTUARIAL COST METHOD

Costs have been computed in accordance with the Unit Credit Actuarial Cost Method and reflect the actuarial assumptions described in “Plan Assumptions” of this report as provided under the applicable regulations of the Pension Protection Act of 2006.

Target Normal Cost

The Target Normal Cost is the present value of benefits expected to accrue during the plan year for all Participants plus an estimate of the expenses to be paid from the plan assets during the plan year.

Target Liability and Funding Shortfall

As of January 1, 2008, a Target Liability is established which represents the present value of accrued benefits. This Target Liability is offset by adjusted assets, and the remainder (i.e. Funding Shortfall), if any, is amortized over seven years.

Subsequent changes in the Funding Shortfall due to asset experience, liability experience, plan amendments, and/or actuarial assumption changes will be amortized over a seven year period from their valuation dates.

Discount Rate

The plan sponsor has elected to use the Segment Rate approach for discount rate purposes, with an applicable month that is 4 months prior to the valuation date.

In addition, beginning with the 2012 plan year, solely for purposes of determining the minimum required contribution level, applicability of benefit restrictions, and for the at-risk determination, the adjusted 24-month average segment rates established by MAP-21 have been incorporated.

The adjusted 24-month average segment rates are generated by taking the unadjusted 24-month average segment rates for the sponsor-chosen lookback month and adjusting them so that each individual segment rate is not outside of the stipulated corridor around the corresponding 25-year average segment rate for the given plan year. For the 2013 plan year, the stipulated corridor is 85% - 115% of these 25-year average segment rates.

II. ASSET VALUATION METHOD

Assets have been valued in accordance with generally accepted procedures as described below.

All funds invested are valued in the following manner:

Definitions

i(t)	assumed growth rate, set equal to the lesser of the expected return on assets or the applicable 3 rd segment rate for Plan Year t.
C(t)	sum of contributions and other additions to the fund from all sources other than investment transactions in Plan Year t
W(t)	sum of all withdrawals and other decreases to the fund from all sources other than investment transactions in Plan Year t
AV(t)	Actuarial Value of Assets as of Plan Year t
MV(t)	Market Value of Assets as of Plan Year t

Actuarial Cost Method

EV(t) Expected Value of Assets as of Plan Year t

G/L(t) Gain or Loss for Plan Year t

Method

A description of the method used to determine the current year's Actuarial Value of Assets {AV(t)} is below.

For the preceding 2 years, G/L(t) is determined as follows:

$$EV(t) = MV(t-1) * (1 + i(t-1)) + [C(t-1) - W(t-1)] * (1 + i(t-1) * m)$$

Where m represents a proportionate yield consistent with the portion of the year for which C and W are invested

$$G/L(t-1) = EV(t) - MV(t)$$

For the current year, AV(t) is determined as follows:

$$AV(t) = MV(t) + 2/3 * G/L(t-1) + 1/3 * G/L(t-2)$$

Corridor Limits

The Actuarial Value of Assets may not be less than 90% or more than 110% of the current market value of plan assets as of the applicable valuation date [as required by IRC Section 430(g)(3)(B)(iii)]

Please note, as highlighted above, the assumed asset growth rate for each year is limited to the applicable 3rd segment rate by law. As a result, if the plan's expected rate of return is greater than this applicable rate, this method is expected to produce an actuarial value of assets that can be expected to be slightly less than the market value of assets, on average.

The market value of the Guaranteed Deposit Account is an estimate only and not the result of the precise calculation which would be done at contract discontinuance or to measure the impact of excess withdrawals in any calendar year. It does not constitute an offer by Prudential or a final experience adjustment. Please be sure that anyone to whom you quote this value receives this explanation.

Actuarial Assumptions

Assumptions have been chosen to anticipate the long range experience of the Plan. Consistency among assumptions is important as each interacts with the others; equally important is the recognition of inflationary trends in the economy.

As the Enrolled Actuary for the Plan, I certify to the reasonableness of these assumptions, in aggregate, as required by ERISA.

The actuarial assumptions used to compute Plan costs are:

Investment Return:

For ASC 960 purposes:

7.00% per annum, compounded annually, net of investment and contract fees.

For minimum required contribution level, applicability of benefit restrictions, and at risk determination only:

Segment Rates with a 4 month lookback, as adjusted by the 85%-115% corridor around the 25-year average segment rates (4.94%, 6.15%, and 6.76% for the 2013 plan year)

For all other purposes:

Segment Rates with a 4 month lookback, unadjusted (1.75%, 4.62%, and 5.72% for the 2013 plan year)

Expected Return on Plan Assets

8.00%

Estimated Expenses:

An estimate of the administrative expenses expected to be paid from plan assets. For 2013 this amount is \$23,000.

Mortality:

The 2013 IRS Static Mortality Table.

Termination:

There are only inactive participants.

Disability:

There are only inactive participants.

Retirement Rates:

There are only inactive participants. Terminated Vested Participants are assumed to retire at age 65.

Survivor's Benefit:

It is assumed that husbands are 5 years older than wives and that 80% of the Participants who are or will become eligible for coverage under the Survivor's Benefit will be survived by an eligible survivor.

Normal Retirement Benefit	Accrued Benefit payable at age 65.
Early Retirement Eligibility	Age 55 and 15 years of Service.
Early Retirement Benefit	Actuarial equivalent of the normal retirement benefit
Deferred Vested Benefit	<p>Eligible after 5 years of Service – All participants became fully vested on April 3, 1992.</p> <p>All employees who completed 15 years of service may elect to receive an actuarially reduced benefit after reaching age 55.</p>
Preretirement Spouse Benefit	<p>Each married participant and former employee who is entitled to a deferred vested benefit is automatically covered by the Pre-retirement Survivor Annuity Coverage unless such coverage is waived with a signed spousal consent. If coverage is not waived and the employee dies, the spouse is entitled to a surviving spouse pension equal to the amount to which the surviving spouse would have been entitled if the participant's commencement date had been the day before his death, or age 55 if later, and his accrued pension had been payable in the form of a 50% Joint and Survivor Annuity.</p> <p>The Pension is reduced 7/10th of 1% for each full year prior to age 65 that the coverage is in effect. This reduction is also taken into account when computing the spouse's benefit.</p>
