Mortality

Funding liability: The assumed mortality is The Goodyear Tire & Rubber Company Hourly Substitute Mortality Table with separate male and female rates, as allowed under Section 430(h)(3)(C) of the Internal Revenue Code. The tables are developed based on the mortality experience of the Goodyear hourly disabled and non-disabled population for the period 2002-2006. These tables are generational based on the IRS-prescribed projection scale, with a base year of 2003. The mortality rates are applied to both non-disabled and disabled participants. The IRS has approved use of this table for the period beginning with the 2008 plan year, and ending with the 2017 plan year. The following rates are illustrative for the base year:

Attained Age	Percentage of Participants Expected to Die Within One Year	
	Males	Females
25	.0365	.0198
30	.0434	.0256
35	.1072	.0459
40	.1844	.0675
45	.2417	.2573

80	7.5588	6.1004
85	12.9962	9.7972
90	20.3289	18.1436

ASC 960 liability: The assumed non-disabled mortality is the 2009 Goodyear Hourly Healthy Mortality Table with separate male and female rates. The tables are developed based on the mortality experience of the Goodyear non-disabled population for the period 2007-2011. For disabled retirees, unisex rates are assumed equal to non-disabled male mortality rates increased by 0.02 at each age up to 60 and by 0.03 at ages 60 and over. No mortality projection is used.

Retirement

There are no longer any active participants in the plan. All vested exits are assumed to retire at age 65.

Representative termination rates (per 100 employees) not due to disability, retirement or mortality

Not applicable. All participants are considered vested exits or retirees as of June 30, 1992.

Form of payment

Participants are assumed to elect the normal form.

Marriage

For purposes of valuing the pre-retirement surviving spouse's benefit, 85% of male participants and 50% of female participants are assumed to be married.

Employees

It is assumed that there will be no new or rehired employees.

At-risk assumptions

For at-risk calculations, all participants eligible to commence benefits during the current and subsequent ten plan years are assumed to commence benefits at the earliest possible date under the plan, but not before the end of the current plan year, except in accordance with the regular valuation assumptions. In addition, all participants (not just those eligible to begin benefits within the next 11 years) are assumed to elect the most valuable form of benefit under the plan.

Timing of benefit payments

Annuity payments are payable monthly at the beginning of the month and lump sum payments are payable on the date of decrement.

Funding Target

Present value of accrued benefits.

Target normal cost

Present value of benefits expected to accrue during the plan year.

ASC 960 cost method

The Unit Credit actuarial cost method has been used for ASC 960 purposes. This is a method under which the projected benefit of each individual included in the actuarial valuation is allocated to valuation years on the basis of the service of the individual (adjusted to reflect rates of benefit accruals).

The actuarial present value of benefits allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to all periods prior to the valuation year is called the actuarial accrued liability.

Asset method

The asset method is three-year smoothing with assumed return. Under this method, the valuation assets are equal to the average of three values (all determined without regard to receivable contributions), the result increased by the discounted present value of contributions expected to be made after the valuation date based on the prior plan year PPA effective interest rate. This amount is then subject to a 10% corridor around the market value of assets (including the discounted present value of receivable contributions) as of the valuation date. The three values used to develop the average value are: the market value of assets as of the current valuation date, the adjusted market value of assets as of the prior valuation date and the adjusted market value of assets as of the second prior valuation date. The adjusted market value as of a relevant valuation date is equal to the market value of assets as of the prior valuation date increased by actual plan contributions and assumed return on plan assets and decreased by actual plan disbursements after that date until the current valuation date. The assumed rate of return on plan assets for the prior plan year (pursuant to IRS Notice 2009-22) was 7.52%, which is the lesser of the anticipated rate of return on assets for the plan year, equal to 8.50%, and the applicable limitation for the plan year, equal to 7.52%. The assumed rate of return on plan assets for the second prior plan year (pursuant to IRS Notice 2009-22) was 6.57%, which is the lesser of the anticipated rate of return on assets for the plan year, equal to 8.50%, and the applicable limitation for the plan year, equal to 6.57%. The algebraically equivalent development of this method (pursuant to IRS Notice 2009-22) is shown in Section 2.3. Because expected investment returns under this method are limited under WRERA, over time it is more likely to produce an actuarial value that is expected to be less than the market value of assets.

Participant data

Employee data were supplied by the employer as of the census date.

Tax policy

The actuarial valuation performed for the plan year ending December 31, 2013 is used to determine the maximum deductible contribution for the tax year ending December 31, 2013.

Benefits not included in valuation

None. Service Awards and Special Distributions are not applicable to any current participants.

Nature of actuarial calculations

The results documented in this report are estimates based on data that may be imperfect and on assumptions about future events. Certain plan provisions may be approximated or deemed insignificant and therefore are not valued. Assumptions may be made about participant data or other factors. Reasonable efforts were made in this valuation to ensure that items that are significant in the context of the actuarial liabilities or costs are treated appropriately, and not excluded or included inappropriately.

A range of results, different from those presented in this report could be considered reasonable. The numbers are not rounded, but this is for convenience only and should not imply a level of precision beyond that which is inherent in actuarial calculations. Certain percentages determined in this report, such as the Funding Target Attainment Percentage, are truncated to be consistent with the instructions for Schedule SB of the Form 5500.

The assumptions selected for this valuation other than those prescribed by law, generally reflect long-term average expectations. If overall future plan experience is less favorable than assumed, the relative level of plan costs or contribution requirements determined in this valuation will likely increase in future valuations. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for the measurements (such as the end of an amortization period); and changes in plan provisions or applicable law. It is beyond the scope of this actuarial valuation to analyze the potential range of future pension contributions, but we can do so upon request.

Changes in Methods since Last Actuarial Valuation

None.

Changes in Assumptions since Last Actuarial Valuation

The mortality table for ASC 960 has changed from the 2003 Goodyear Hourly Healthy Mortality Table to the 2009 Goodyear Hourly Healthy Mortality Table, with a corresponding change to disabled mortality.

Mortality

Funding liability: The assumed mortality is The Goodyear Tire & Rubber Company Hourly Substitute Mortality Table with separate male and female rates, as allowed under Section 430(h)(3)(C) of the Internal Revenue Code. The tables are developed based on the mortality experience of the Goodyear hourly disabled and non-disabled population for the period 2002-2006. These tables are generational based on the IRS-prescribed projection scale, with a base year of 2003. The mortality rates are applied to both non-disabled and disabled participants. The IRS has approved use of this table for the period beginning with the 2008 plan year, and ending with the 2017 plan year. The following rates are illustrative for the base year:

Percentage of Participants Expected to Die Within One Year		
Attained Age	Males	Females
25	.0365	.0198
30	.0434	.0256
35	.1072	.0459
40	.1844	.0675
45	.2417	.2573

80	7.5588	6.1004
85	12.9962	9.7972
90	20.3289	18.1436

ASC 960 liability: The assumed non-disabled mortality is the 2009 Goodyear Hourly Healthy Mortality Table with separate male and female rates. The tables are developed based on the mortality experience of the Goodyear non-disabled population for the period 2007-2011. For disabled retirees, unisex rates are assumed equal to non-disabled male mortality rates increased by 0.02 at each age up to 60 and by 0.03 at ages 60 and over. No mortality projection is used.

Retirement

There are no longer any active participants in the plan. All vested exits are assumed to retire at age 65.

Representative termination rates (per 100 employees) not due to disability, retirement or mortality

Not applicable. All participants are considered vested exits or retirees as of June 30, 1992.

Form of payment

Participants are assumed to elect the normal form.

Marriage

For purposes of valuing the pre-retirement surviving spouse's benefit, 85% of male participants and 50% of female participants are assumed to be married.

Employees

It is assumed that there will be no new or rehired employees.

At-risk assumptions

For at-risk calculations, all participants eligible to commence benefits during the current and subsequent ten plan years are assumed to commence benefits at the earliest possible date under the plan, but not before the end of the current plan year, except in accordance with the regular valuation assumptions. In addition, all participants (not just those eligible to begin benefits within the next 11 years) are assumed to elect the most valuable form of benefit under the plan.

Timing of benefit payments

Annuity payments are payable monthly at the beginning of the month and lump sum payments are payable on the date of decrement.

Funding Target

Present value of accrued benefits.

Target normal cost

Present value of benefits expected to accrue during the plan year.

ASC 960 cost method

The Unit Credit actuarial cost method has been used for ASC 960 purposes. This is a method under which the projected benefit of each individual included in the actuarial valuation is allocated to valuation years on the basis of the service of the individual (adjusted to reflect rates of benefit accruals).

The actuarial present value of benefits allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to all periods prior to the valuation year is called the actuarial accrued liability.

Asset method

The asset method is three-year smoothing with assumed return. Under this method, the valuation assets are equal to the average of three values (all determined without regard to receivable contributions), the result increased by the discounted present value of contributions expected to be made after the valuation date based on the prior plan year PPA effective interest rate. This amount is then subject to a 10% corridor around the market value of assets (including the discounted present value of receivable contributions) as of the valuation date. The three values used to develop the average value are: the market value of assets as of the current valuation date, the adjusted market value of assets as of the prior valuation date and the adjusted market value of assets as of the second prior valuation date. The adjusted market value as of a relevant valuation date is equal to the market value of assets as of the prior valuation date increased by actual plan contributions and assumed return on plan assets and decreased by actual plan disbursements after that date until the current valuation date. The assumed rate of return on plan assets for the prior plan year (pursuant to IRS Notice 2009-22) was 7.52%, which is the lesser of the anticipated rate of return on assets for the plan year, equal to 8.50%, and the applicable limitation for the plan year, equal to 7.52%. The assumed rate of return on plan assets for the second prior plan year (pursuant to IRS Notice 2009-22) was 6.57%, which is the lesser of the anticipated rate of return on assets for the plan year, equal to 8.50%, and the applicable limitation for the plan year, equal to 6.57%. The algebraically equivalent development of this method (pursuant to IRS Notice 2009-22) is shown in Section 2.3. Because expected investment returns under this method are limited under WRERA, over time it is more likely to produce an actuarial value that is expected to be less than the market value of assets.

Participant data

Employee data were supplied by the employer as of the census date.

Tax policy

The actuarial valuation performed for the plan year ending December 31, 2013 is used to determine the maximum deductible contribution for the tax year ending December 31, 2013.

Nature of actuarial calculations

The results documented in this report are estimates based on data that may be imperfect and on assumptions about future events. Certain plan provisions may be approximated or deemed insignificant and therefore are not valued. Assumptions may be made about participant data or other factors. Reasonable efforts were made in this valuation to ensure that items that are significant in the context of the actuarial liabilities or costs are treated appropriately, and not excluded or included inappropriately.

A range of results, different from those presented in this report could be considered reasonable. The numbers are not rounded, but this is for convenience only and should not imply a level of precision beyond that which is inherent in actuarial calculations. Certain percentages determined in this report, such as the Funding Target Attainment Percentage, are truncated to be consistent with the instructions for Schedule SB of the Form 5500.

The assumptions selected for this valuation other than those prescribed by law, generally reflect long-term average expectations. If overall future plan experience is less favorable than assumed, the relative level of plan costs or contribution requirements determined in this valuation will likely increase in future valuations. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for the measurements (such as the end of an amortization period); and changes in plan provisions or applicable law. It is beyond the scope of this actuarial valuation to analyze the potential range of future pension contributions, but we can do so upon request.

Changes in Methods since Last Actuarial Valuation

None.
