Summary of Actuarial Methods

Actuarial Cost Method

All liabilities and normal costs shown in this report are calculated based on the Traditional Unit Credit method as described in IRC Section 430 and relevant proposed regulations. This method is prescribed for funding calculations.

Under the Traditional Unit Credit method, the liability is the present value of all benefits that have been accrued or earned under the plan as of the first day of the plan year. The normal cost is the present value of all benefits that are expected to accrue or be earned during the plan year, including any expected increase in compensation during the year.

Asset Valuation Method

The actuarial value of assets is equal to the market value of assets.

Miscellaneous

The limitations under IRC Sections 401(a)(17) and 415(b) have been taken into account in our calculations.

Any actual or potential limitations under IRC Section 436 have not been taken into account for any purpose.

To the best of our knowledge, all benefits payable from the plan, including retirement-type and ancillary benefits, have been incorporated into our calculations.

No liability is included for participants who terminated without vested benefits prior to the first day of the plan year.

No liability is included for any employees who are not yet participants as of the first day of the plan year.
