CENSUS and ASSUMPTIONS

Valuation Census Date Census data was provided by the Plan Sponsor as of January 01, 2014. We have reviewed the data for consistency and have no reason to doubt its substantial accuracy.

Valuation Interest Rates IRS-Prescribed Three-Segment Rates, for the fourth month prior to the valuation date (Sep).

	24-Month Segment Rates	
	Unadjusted	Limited to 25 Year Corridor
Segment I:	1.37%	4.99%
Segment II:	4.05%	6.32%
Segment III:	5.06%	6.99%

The "Limited to 25 Year Corridor" rates are adjusted by the applicable maximum and applicable minimum percentages of the 25-year average segment rates, as set forth in the Highway and Transportation Funding Act of 2014 ('HATFA-14') for use in Minimum Required Contribution calculations. The IRS Maximum Deductible Limit Calculations use the rates from the "Unadjusted" column above.

The Effective Interest Rate (EIR) for the 2014 Plan Year was 6.54%. For the prior Plan year, the EIR was 6.38%.

The EIR is the single rate of interest which, if used to determine the Funding Target, would equal the Funding Target determined using the plan sponsor's above elected discount rates. The EIR is used to discount contributions for minimum funding requirements and to accumulate excess contributions to the end of the year.

Mortality Table Elected IRS Prescribed Optional Combined Mortality for Males and Females (1.430(h)(3)-1) for the current Plan Year.

Valuation Assets Assets are equal to their Fair Market Value plus receivable contributions.

Expenses Expenses were assumed to be met directly by the Plan Sponsor.

Salary Scale The salary increase assumption is 5.00% per year. Plan accruals are Frozen.

Taxable Wage Base Increases None.

CENSUS and ASSUMPTIONS

Inflation

None.

Marriage

100% of Males and 100% of Females are assumed to be married. Females are assumed to be 3 years younger than males. This assumption is expected to reflect actual plan experience but a formal analysis has not been conducted due to the lack of credible experience.

Retirement Rates

Retirement was assumed at age 62.

100% of future retirements are assumed to take a lump sum. The valuation of participants in pay status is based on the actual form of payment elected by the participant, as provided in the census data.

Withdrawal Rates

T-7 LESS GA51M Below is a table of representative rates.

Age	Rates
20	0.099384
25	0.096742
30	0.093031

45	0.063540
50	0.042247
55	0.015488
60	0.001465

Commencement of future deferred vested participants is assumed paid as a lump sum. Commencement is assumed at this age 65 since there is not enough credible experience to assume otherwise.

Disability Incidence

None assumed.

CENSUS and ASSUMPTIONS

ACTUARIAL METHODS

Minimum Funding Cost Method

The actuarial cost method used to determine the liabilities for minimum funding calculations is the Traditional Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for each participant. The individual accrued liability for a participant is the present value of the accrued benefit as of the valuation date taking into account service and/or pay as of the valuation date. The individual normal cost for a participant is the present value of the benefit expected to accrue in the plan year being valued.

If a plan is frozen, there is no normal cost attributable to benefit accruals.

Maximum deductible contribution method

The actuarial cost method used to determine the liabilities for maximum deductible calculations is the Projected Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue, taking into consideration expected future compensation increases. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for all participant. The individual accrued liability for a participant is the sum of 1) the present value of the accrued benefit earned as of the valuation date taking into account service and/or pay as of the valuation date; plus 2) the present value of the accrued benefit expected to be earned because of any expected future compensation increases.

The individual normal cost for a participant is the sum of the present value of the benefit expected to accrue in the plan year being valued taking into account any expected future compensation increases.

ACTUARIAL METHODS

Asset Method

We used financial data submitted by the trustee as of the valuation date without further audit. This information was not be verified by a plan's actuary. We have reviewed the information for internal consistency, and we have no reason to doubt is substantial accuracy.

Assets are equal to their Fair Market Value plus receivable contributions.
