Rationale: Interest rate prescribed by IRS**Mortality sponsor elections**

• Healthy participants	Section 430(h)(3) prescribed separate static annuitant and non-annuitant mortality tables used for 2014 funding purposes. These tables are based on the RP-2000 mortality tables projected with mortality improvement to the valuation year, plus 7 years for annuitants and 15 years for non-annuitants based on Scale AA.
• Disabled participants	Same as healthy

Other economic assumptions

• Salary increases	3.00% per year <i>Rationale:</i> Salary scale assumption is chosen by Matson, Inc. This assumption reflects management's expectation of short-term and long-term salary increases. This assumption historically has been used for the plan and has not produced significant gains or losses.
• Social Security wage base	3.25% per year <i>Rationale:</i> The Social Security wage base increase assumption reflects 0.75% real wage growth, based on historical US Average Wage increases.
• Inflation	2.50% per year <i>Rationale:</i> The inflation assumption is based on the inflation assumption published by Mercer Investment Consulting in their Capital Market Outlook.
• Expected investment return	8.25% per year <i>Rationale:</i> The expected investment return is selected by Matson, Inc. It is within the acceptable range based on simulated investment return using capital market assumptions published in Mercer Investment Consulting's <i>Capital Market Outlook</i> dated October 2014 for the plan's target asset mix, net of and adjustment of 20 basis points for investment expenses assumed to be paid from plan assets.
• Expenses	\$17,000 added to current year normal cost. <i>Rationale:</i> Administrative expense assumption is based on prior year's non-investment expenses, paid from plan assets, adjusted for expected PBGC premiums.

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods

Actuarial Methods

Asset Methods

The asset valuation method is an average of the adjusted market value for each year during the last two years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110 percent and no less than 90 percent of the fair market value, as defined in IRC Section 430.

A characteristic of this asset method is that, over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

Participant Methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break in service on the valuation date are treated as terminated participants.

Minimum Funding Methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.

Schedule SB, line 24 — Change in Actuarial Assumptions

- The expense component of normal cost is updated from \$11,425 to \$17,000 to reflect expected increase in administrative expenses.
- The inflation assumption has been updated from 3.25% to 2.50%.
- The Social Security taxable wage base has been updated from 3.50% to 3.25%.
