Methods

Valuation date	First day of plan year.
Funding target	Present value of accrued benefits as required by regulations under IRC §430.
Target normal cost	Present value of benefits expected to accrue during plan year plus plan-related expenses expected to be paid from plan assets during plan year as required by regulations under IRC §430.
Actuarial value of assets for determining minimum required contributions	Average of the fair market value of assets on the valuation date and 12 and 24 months before the valuation date, adjusted for contributions, benefits, administrative expenses and expected earnings. The average asset value must be within 10% of fair value, including contributions receivable. The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years.
Benefits not valued	Only the 50% survivor benefit has been valued. The subsidized death benefit in excess of the 50% survivor benefit was not valued. All other benefits described in the Plan Provisions section of this report were valued. Towers Watson has reviewed the plan provisions with Dresser Incorporated and, based on that review, is not aware of any significant benefits required to be valued that were not.

Changes in Assumptions and Methods Since Prior Valuation

Change in assumptions and methods since prior valuation	The segment interest rates used to calculate the funding target and target normal cost were updated from May 2013 to May 2014. The required mortality table used to calculate the funding target and target normal cost was updated to include one additional year of projected mortality improvements.

Weighted average retirement age: 63

As shown on Line 22 of the Schedule SB, the weighted average retirement age is 63. The weighted average retirement ages were weighted in proportion to the probability that an active participant under age 55 would remain an active participant to each age and then retire at that age. When determining the probability of remaining an active participant to a given age, only the retirement decrement assumption was taken into consideration.
