Methods

Valuation date	First day of plan year
Funding target	Present value of accrued benefits
Target normal cost	Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year.
Actuarial value of assets for determining minimum required contributions	<p>Average of the fair market value of assets on the valuation date and the dates 12 and 24 months before the valuation date, adjusted for contributions, benefits, administrative expenses and expected earnings (with such expected earnings limited as described in IRS Notice 2009-22). The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for 2014).</p> <p>The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years. However, over the long term under PPA's smoothing rules, the method has a significant bias to produce an actuarial value of assets that is below the market value of assets.</p>
Benefits not valued	We believe that we have reflected all significant plan provisions in this valuation.
PBGC premium funding target	For purposes of determining the PBGC Premium Funding ratio, the Alternative Premium Funding Target was determined using the assumptions described above.

Assumptions Rationale - Significant Economic Assumptions

Discount rate	The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.
Expected return on plan assets	We understand that the expected return on assets assumption reflects the plan sponsor's estimate of future experience for trust asset returns, reflecting the plan's current asset allocation and any expected changes during the current plan year, current market conditions and the plan sponsor's expectations for future market conditions.
Administrative expenses	The plan sponsor pays certain administrative expenses from the trust (approximately \$10,000 in each of the last two years). Our understanding is that a small adjustment is reflected in the expected rate of return on plan assets to account for these payments.

Assumptions Rationale - Significant Demographic Assumptions

Healthy mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Disabled mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Termination	Assumed termination rates vary by age with virtually no termination assumed after age 45. Currently, there are only 2 active participants younger than age 45. Experience has shown almost no voluntary turnover in recent years.
Disability	Due to lack of credible experience, disability rates are based on a well-known published disability incidence table.
Retirement	Because the plan does not subsidize early retirement benefits and the earliest retirement age is 60, the retirement age assumption has been set at 65. Experience has shown very few early retirements. Currently, there is only 1 retiree younger than age 65.

SCHEDULE SB ATTACHMENTS

Benefit commencement date for deferred benefits:

- Preretirement death benefit Surviving spouses are assumed to begin benefits at the earliest permitted commencement date because ERISA requires benefits to start then unless the spouse elects to defer. If the spouse elects to defer, actuarial increases from the earliest commencement date must be given, so that a later commencement date is expected to be of approximately equal value, and experience indicates that most spouses do take the benefit as soon as it is available.
- Deferred vested benefit Deferred vested participants are assumed to begin benefits at age 65 (or current age if later) because the plan's experience is not considered to be credible. Also, deferred vested early commencement factors are not subsidized so that the difference between this approach and using assumed commencement rates at earlier ages is not expected to be significant.

Form of payment The plan only offers a life annuity or a joint & survivor annuity. The payment amounts are actuarially equivalent, as defined in the plan document. Thus, the assumption for annuity form of payment is not expected to be significant.

Percent married The assumed percentage married is based on general population statistics on the marital status of individuals over age 40.

Spouse age The assumed age difference for spouses is based on general population statistics of the age difference for married individuals.

Source of Prescribed Methods

Funding methods The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are "prescribed methods set by law", as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.
