Statement by Enrolled Actuary
To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

ACTUARIAL ASSUMPTIONS

Valuation Census Date

Census data was provided by the Plan Sponsor as of January 01, 2016. We have reviewed the data for consistency and have no reason to doubt its substantial accuracy.

Valuation Interest Rates

IRS-Prescribed Three-Segment Rates, for the fourth month prior to the valuation date (Sep).

	24-Month Segment Rates	
	Unadjusted	Limited to 25 Year Corridor
Segment I:	1.34%	4.43%
Segment II:	4.03%	5.91%
Segment III:	5.06%	6.65%

The "Limited to 25 Year Corridor" rates are adjusted by the applicable maximum and applicable minimum percentages of the 25-year average segment rates, as set forth in the Highway and Transportation Funding Act of 2014 ('HATFA-14') for use in Minimum Required Contribution calculations. The IRS Maximum Deductible Limit Calculations use the rates from the "Unadjusted" column above.

The Effective Interest Rate (EIR) for the 42370 Plan Year was 6.11%. For the prior Plan year, the EIR was 6.20%.

The EIR is the single rate of interest which, if used to determine the Funding Target, would equal the Funding Target determined using the plan sponsor's above elected discount rates. The EIR is used to discount contributions for minimum funding requirements and to accumulate excess contributions to the end of the year.

Healthy Participant Mortality

IRS Section 1.430(h)(3)-1 optional combined static annuitant and non-annuitant mortality tables, for males and females. These tables are based on the RP-2000 mortality tables projected with mortality improvements to the valuation year, plus 7 years for annuitants and plus 15 years for non-annuitants, using Projection Scale AA.

Disabled Participant Mortality

N/A - There are no disabled participants and no Disability Incidence is assumed.

ACTUARIAL ASSUMPTIONS

Expected Return on Assets

The expected return on assets (EROA) used in the calculation of the actuarial value of assets is the lesser of a) and b), below:

a) The assumed long-term rate of return on assets chosen by the plan sponsor based on actual trust allocations; or

b) The third segment rate in the IRS-Prescribed Three Segment Rates chosen by the plan sponsor for minimum funding purposes.

<u>Plan Year</u>	<u>(a)</u>	<u>(b)</u>	<u>EROA</u>
2015	8.00%	6.81%	6.81%
2014	8.00%	6.76%	6.76%

Expenses

Expenses were assumed to be met directly by the Plan Sponsor.

ACTUARIAL METHODS

Minimum Funding Cost Method

The actuarial cost method used to determine the liabilities for minimum funding calculations is the Traditional Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for each participant. The individual accrued liability for a participant is the present value of the accrued benefit as of the valuation date taking into account service and/or pay as of the valuation date. The individual normal cost for a participant is the present value of the benefit expected to accrue in the plan year being valued.

If a plan is frozen, there is no normal cost attributable to benefit accruals.

Maximum deductible contribution method

The actuarial cost method used to determine the liabilities for maximum deductible calculations is the Projected Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue, taking into consideration expected future compensation increases. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for all participant. The individual accrued liability for a participant is the sum of 1) the present value of the accrued benefit earned as of the valuation date taking into account service and/or pay as of the valuation date; plus 2) the present value of the accrued benefit expected to be earned because of any expected future compensation increases.

The individual normal cost for a participant is the sum of the present value of the benefit expected to accrue in the plan year being valued taking into account any expected future compensation increases.

ACTUARIAL METHODS

Asset Method

We used financial data submitted by the trustee as of the valuation date without further audit. This information was not be verified by a plan's actuary. We have reviewed the information for internal consistency, and we have no reason to doubt is substantial accuracy.

The Actuarial Value of Assets is determined by averaging the market value of assets, plus discounted receivable contributions, over the current and prior two years using three annual determination dates, adjusted for contributions, benefit payments, administrative expenses, and expected earnings. The resulting value is held to a minimum of 90% and a maximum of 110% of the fair market value. This method is in accordance with IRS Notice 2009-22.

Statement by Enrolled Actuary
 To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
