Schedule SB, Part V - Summary of Actuarial Assumptions/Methods (continued)

4. Cash Balance Account Interest Credit: 3.04% compounded annually for accumulating account balances
5. Expenses: The Plan Sponsor is assumed to pay all administrative expenses outside the Plan.
6. Form of Payment: 100% of deferred vested & active participants assumed to take a lump sum payment
7. Asset Valuation Method: Market Value
8. Assumed Retirement Age: 55 or attained age if greater
9. Top Heavy Minimum: Minimum benefits were recognized in the defined contribution plan as of the valuation date since the plan was top heavy as of the determination date.
10. Funding Method:

Traditional Unit Credit

The actuarial cost method used in the valuation was the unit credit cost method.

The normal cost is the sum of all the individual normal costs for each participant. For active participants, the individual normal cost is the present value of the benefit earned during the year being valued. For active participants whose credited service equals or exceeds the plan maximum, if any, and for non-active participants, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability for an active participant is the present value of the accrued benefit as of the valuation date. The unfunded liability is the actuarial accrued liability less the valuation assets.

The total annual cost of the plan is the normal cost plus the shortfall amortization charge.

Projected Unit Credit

The actuarial cost method used in the development of the maximum contribution and the at-risk liabilities was the projected unit credit cost method.

Under this method, the normal cost is the sum of the individual normal costs for all participants. For an active participant, the individual normal cost is the present value at the current age of the projected benefit at the assumed retirement age, based on the actuarial assumptions, divided by the participant's expected years of credited service at that age. For a non-active participant, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. For an active participant, the individual accrued liability is the product of the normal cost and the total years of credited service at the current age. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded actuarial accrued liability equals the actuarial accrued liability less the valuation assets.
