APPENDIX B

STATEMENT OF ACTUARIAL ASSUMPTIONS AND METHODS

Interest Rates

Funding: 24-month segment rates averaged through the end of August 2015 and published in September 2015:

	Before MAP-21/ HATFA	Reflecting MAP-21/ HATFA
a. First Rate, Years 1-5	1.34%	4.43%
b. Second Rate, Years 5-20	4.03%	5.91%
c. Third Rate, Years 20+	5.06%	6.65%
d. Effective Interest Rate using the above rates	3.80%	5.76%
e. Interest rate for developing expected value of assets (limited by statute)		4.00%

Salary Scale

For accrued benefits actual individual pay histories have been used. All participants are past Normal Retirement and so no additional 401(k) contributions are used.

Mortality

Funding: RP-2000 static, non-generational Mortality Table as described in Regulation 1.430(h)(3) projected by Scale AA, to between 7 and 15 years beyond the year of the obligation, male and female, with combined rates for annuitants and nonannuitants.

Rates of Retirement

100% at age 65.

Weighted Average Retirement Age is 65. This is the average retirement age for someone eligible to retire at all ages using the assumed retirement rates and no other decrements.

Rates of Disability

None.

Rates of Turnover

None.

APPENDIX B (Continued)

<i>Assumptions Made In Valuing Spouse's Benefit</i>	Eighty percent of the male and fifty percent of the female employees included in the valuation are assumed to be married. These percentages are used as the probabilities that survivor benefits will be payable due to preretirement deaths. The wife is assumed to be three years younger than the husband.
<i>Optional Form Election</i>	All employees are assumed to elect the life annuity benefit.
<i>Annual Increases to Maximum Benefits and Plan Compensation Limits</i>	Funding: 0.00%
<i>Provision for Expenses</i>	The expected administrative (i.e. non-investment) expenses that will be paid from plan assets, which were assumed to equal actual administrative expenses during the prior year plus PBGC premiums for the current year, were included in the Target Normal Cost for minimum contribution purposes.
<i>Standing Elections</i>	Lima Memorial Health System has signed an election that provides for the automatic use of the Carryover and/or Prefunding Balance if necessary at the end of the plan year to meet the minimum funding requirement. This election also provides for excess contributions to be added to the Prefunding Balance.
<i>Asset Method</i>	Funding: Market Value of Assets plus interest adjusted accrued but unpaid contributions as of the valuation date plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year, minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). Note that due to the regulatory constraint on the interest rate, a characteristic of this asset valuation method is that, over time, it may be more likely to produce an actuarial value of assets that is less than the market value of assets.
<i>Employees Valued</i>	Only participants as of the valuation date were valued.

APPENDIX B (Continued)

Selection of Assumptions

The segment rates and mortality table used to determine minimum funding and funded ratios were based on methodology mandated by Internal Revenue Code and rates published by the Internal Revenue Service to affect it.

A complete review of non-economic assumptions, to satisfy ASOP 35, has not been done since the plan was acquired, but we monitor the gains and losses annually to ensure the assumptions are still reasonable.

Changes in Assumptions and Methods since the Last Actuarial Valuation

The segmented interest rates used for determining the funding target were 4.72%, 6.11% and 6.81%. These rates were updated to the rates required for the current plan year. The HATFA segment rates were also reflected.

The mortality table for the funding target was changed as required under PPA '06.

Justification for Changes in Actuarial Assumptions

The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any "Change in Actuarial Assumptions."
