Forms of payment	Preretirement death benefits are payable only as described above. Monthly pension benefits may be paid in the following optional forms (in lieu of the Normal Form): Life only, 50%, 75% and 100% Joint and Survivor (based upon appropriate actuarial factors). Actuarial equivalence shall mean a benefit computed on the basis of the actuarial factors and assumptions included in the Projected Annuity Mortality Table (a table prepared from the unadjusted mortality rates used in constructing the published GA-1951 Mortality Table for males projected 14 years by Scale C and set back five years for females) at 6% interest adjusted to a unisex basis for a participant population deemed to be 90% male and 10% female.

Covered pay Not applicable.

Timing of benefit payments Annuity payments are payable monthly at the beginning of the month.

Methods

Valuation date First day of plan year

Funding target Present value of accrued benefits as required by regulations under IRC §430.

Target normal cost Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.

Actuarial value of assets Average of the fair market value of assets on the valuation date and the two immediately preceding valuation dates, adjusted for contributions, benefits, administrative expenses and expected earnings (with such expected earnings limited as described in IRS Notice 2009-22) . The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for the prior plan year.)

The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years.

Benefits not valued All benefits described in the Plan Provisions section of this report were valued based on discussions with Hynes Industries, Inc. regarding the likelihood that these benefits will be paid. Willis Towers Watson has reviewed the plan provisions with Hynes Industries, Inc. and, based on that review, is not aware of any significant benefits required to be valued that were not.

Assumptions Rationale - Significant Economic Assumptions

Discount rate	The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.
Plan-related expenses	As required by regulations, plan-related expenses are calculated by estimating the expenses to be paid from the trust during the coming year (including, for example, expected PBGC premiums and actuarial, accounting, legal, administration and trustee fees to be paid from the trust).
Rates of increase in:	
• Assumed return for asset smoothing	The assumed return of 6.65% used for asset smoothing is the third segment rate. Although we have not explicitly determined an expected return on assets, based on an analysis of the plan sponsor's investment policy we believe the rate to be above the third segment rate for the 2016 plan year under U.S. GAAP. Although determining the expected rate of return on plan assets was not within the scope of our work, it is the client's best estimate and we determined that it does not significantly conflict with what would be reasonable based on their asset allocation.

Assumptions Rationale - Significant Demographic Assumptions

Healthy Mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Disabled Mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Termination	Termination rates utilize an age/sex-graded assumption based on plan sponsor expectations for future employee turnover. Annual consideration is given as to whether any conditions have changed that would be expected to produce different results in the future.
Retirement	Retirement rates were based on plan sponsor expectations for future retirements, with annual consideration of whether any conditions have changed that would be expected to produce different results in the future.

Source of Prescribed Methods

Funding methods

The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

Changes in Assumptions and Methods

**Change in assumptions
since prior valuation**

The segment interest rates used to calculate the funding target and target normal cost were updated to the current valuation date as required by IRC 430.

The mortality table used to calculate the funding target and target normal cost was updated to include one additional year of projected mortality improvement, as required by IRC 430.

The assumed plan-related expense amount added to the target normal cost was changed from \$78,716 for 2015 to \$58,488 for 2016.

**Change in methods
since prior valuation**

Methods

Valuation date First day of plan year

Funding target Present value of accrued benefits as required by regulations under IRC §430.

Target normal cost Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.

Actuarial value of assets Average of the fair market value of assets on the valuation date and the two immediately preceding valuation dates, adjusted for contributions, benefits, administrative expenses and expected earnings (with such expected earnings limited as described in IRS Notice 2009-22) . The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for the prior plan year.)

The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years.

Benefits not valued All benefits described in the Plan Provisions section of this report were valued based on discussions with Hynes Industries, Inc. regarding the likelihood that these benefits will be paid. Willis Towers Watson has reviewed the plan provisions with Hynes Industries, Inc. and, based on that review, is not aware of any significant benefits required to be valued that were not.

Assumptions Rationale - Significant Economic Assumptions

Discount rate	The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.
Plan-related expenses	As required by regulations, plan-related expenses are calculated by estimating the expenses to be paid from the trust during the coming year (including, for example, expected PBGC premiums and actuarial, accounting, legal, administration and trustee fees to be paid from the trust).
Rates of increase in:	
• Assumed return for asset smoothing	The assumed return of 6.65% used for asset smoothing is the third segment rate. Although we have not explicitly determined an expected return on assets, based on an analysis of the plan sponsor's investment policy we believe the rate to be above the third segment rate for the 2016 plan year under U.S. GAAP. Although determining the expected rate of return on plan assets was not within the scope of our work, it is the client's best estimate and we determined that it does not significantly conflict with what would be reasonable based on their asset allocation.

Assumptions Rationale - Significant Demographic Assumptions

Healthy Mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Disabled Mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Termination	Termination rates utilize an age/sex-graded assumption based on plan sponsor expectations for future employee turnover. Annual consideration is given as to whether any conditions have changed that would be expected to produce different results in the future.
Retirement	Retirement rates were based on plan sponsor expectations for future retirements, with annual consideration of whether any conditions have changed that would be expected to produce different results in the future.

Source of Prescribed Methods

Funding methods The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are "prescribed methods set by law", as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

Changes in Assumptions and Methods

Change in assumptions since prior valuation The segment interest rates used to calculate the funding target and target normal cost were updated to the current valuation date as required by IRC 430.

The mortality table used to calculate the funding target and target normal cost was updated to include one additional year of projected mortality improvement, as required by IRC 430.

The assumed plan-related expense amount added to the target normal cost was changed from \$78,716 for 2015 to \$58,488 for 2016.

Change in methods since prior valuation None.

Normal retirement date (NRD) First of month coinciding with or next following the attainment of age 65.

Normal pension benefit Annual pension equals the sum of the yearly Retirement Annuities purchased for the member. Commencing October 1, 1955 the yearly Retirement Annuity purchased for a member equals 1/2% of the first \$4,200 of his earnings during the year, plus 1-1/2% of the excess of his earnings over \$4,200. In addition, there is an annual minimum benefit equal to \$132 times years of service up to 15 years, plus \$150 times service from 15 years to 30 years, plus \$168 times service over 30 years. For those retiring after January 1, 1981 and whose pension benefit is calculated using the minimum benefit formula, the benefit will increase \$60 per year of service before January 1, 1984 up to 15 years and \$78 per year of service before January 1, 1984 for each year over 15 years. The above benefit is held to a maximum of \$50,000 annually.

Other Plan Provisions

Forms of payment	Preretirement death benefits are payable only as described above. Monthly pension benefits may be paid in the following optional forms (in lieu of the Normal Form): Life only, 50%, 75% and 100% Joint and Survivor (based upon appropriate actuarial factors). Actuarial equivalence shall mean a benefit computed on the basis of the actuarial factors and assumptions included in the Projected Annuity Mortality Table (a table prepared from the unadjusted mortality rates used in constructing the published GA-1951 Mortality Table for males projected 14 years by Scale C and set back five years for females) at 6% interest adjusted to a unisex basis for a participant population deemed to be 90% male and 10% female.
Pension Increases	For certain plan participants, a one time adjustment is made to such participants' accrued benefit as of September 30, 1967.
Plan participants' contributions	Contributions by plan participants are not required or permitted.
Maximum limits on benefits and pay	All benefits and pay for any calendar year may not exceed the maximum limitations for that year as defined in the Internal Revenue Code. The plan provides for increasing the dollar limits automatically as such changes become effective. Increases in the dollar limits are not assumed for determining contributions.

Future Plan Changes

No future plan changes were recognized in determining pension obligation or in determining minimum and maximum contributions. Willis Towers Watson is not aware of any future plan changes which are required to be reflected.
