- ▶ Preretirement death benefit Surviving spouse benefits commence at the later of the death of the active participant or the date the participant would have attained age 55 (or earliest retirement age, if later). However, Steelworker surviving spouse benefits under the WPSC Bargaining provisions are assumed to commence immediately upon the participant's death.
- ▶ Deferred vested benefit Age 65
- ▶ Disability benefit Upon termination of employment. Also, 80% of WPSC Bargaining participants retiring on account of disability will qualify for Social Security benefits.
- ▶ Retirement benefit Upon termination of employment

Form of payment Normal form for unmarried participant, except that all WPSC Salaried participants are assumed to elect lump sum payments

Percent married 85% of males; 65% of females

Spouse age Wife three years younger than husband

Administrative expenses An expense assumption of \$5,230,000 was included in the target normal cost. This assumption is intended to include expected non-investment expenses and PBGC Premiums to be paid from the plan trust during 2016. Non-investment expenses are based on an average of similar expenses paid from the plan in prior years.

At-risk assumptions For at-risk calculations, all participants eligible to elect benefits during the current and subsequent ten plan years are assumed to commence benefits at the earliest possible date under the plan, but not before the end of the current plan year, except in accordance with the regular valuation assumptions. In addition, all participants (not just those eligible to begin benefits within the next 11 years) are assumed to elect the most valuable form of benefit under the plan, which is usually the normal form of payment.

Timing of benefit payments Annuity payments are payable monthly at the beginning of the month and lump sum payments are payable on date of decrement.

WHX Pension Plan II (PN 002)

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods

Methods

Valuation date	First day of plan year
Funding target	<p>Present value of accrued benefits</p> <p>The IRC §430 regulations describe the required methodology for attributing benefits among Funding Target, current year Target Normal Cost, and future years' Target Normal Costs for disability benefits, Social Security benefits, death benefits and other ancillary benefits.</p>
Target normal cost	Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.
Actuarial value of assets	<p>Average of the fair market value of assets on the valuation date and 12 and 24 months preceding the valuation date, adjusted for contributions, benefits, administrative expenses and expected earnings (with such expected earnings limited as described in IRS Notice 2009-22). The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for the 2015 plan year).</p> <p>The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years. However, over the long term under PPA's smoothing rules, the method has a significant bias to produce an actuarial value of assets that is below the market value of assets.</p>
Benefits not valued	<p>All benefits described in the Plan Provisions section of this report were valued. Towers Watson has reviewed the plan provisions with Handy & Harman Ltd. and, based on that review, is not aware of any significant benefits required to be valued that were not.</p> <p>The plan pays small benefits in a single lump sum payment. Such lump sums are not explicitly valued as such; rather such participants' benefits are valued using the benefit choice assumptions described above.</p>
