Segment rates or full yield curve	Segment		
Look-back months	0 for all groups except 138; 4 for group 138

Next 15 years	5.91%	3.92%	3.98%
Over 20 years	6.65%	4.92%	5.00%

These rates were updated since the prior valuation, as prescribed by the IRS.

Expenses

Administrative related expenses (actuarial fees, PBGC premiums, and legal fees) assumed to equal \$64 per participant plus 0.08% of the market value of assets. This is based on analysis of expenses paid in the 2013-2014 plan year. The per participant expense assumption is equal to the current year flat-rate PBGC premium, and is updated annually.

Mortality

Section 430(h)(3) prescribed separate static annuitant and nonannuitant tables for the valuation year. These tables are based on the RP 2000 mortality tables projected with mortality improvement to the valuation year plus 7 and 15 years based on Scale AA.

Turnover

Based on select rates of turnover for the first four years of service and ultimate rates thereafter. Turnover rates reflect findings from the analysis of plan experience for the 2007-2010 valuation years. Sample rates are shown below.

Expected Return on Plan Assets Varies based on which asset pool the plan sponsor is invested in on the valuation date.

- Pool A 7.50%
- Pool B 6.25%
- Pool C 4.75%

As of April 1, 2016, assets for groups 78 and 201 were in Pool B, and assets for all other groups in this valuation were in Pool A.

The expected rate of return on plan assets is based on a blend of hypothetical past performance of each pool's target asset mix and the median simulated investment return using capital market assumptions published in Mercer Investment Consulting's *Capital Markets Outlook* for each pool's target asset mix. This assumption is net of an adjustment of 25 basis points for investment expenses.

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Retirement rates reflect findings from the analysis of plan experience for the 2007-2010 valuation years.

Spouse's benefit 80% of all employees are assumed married with husbands two years older than their wives.

Form of payment 1/3 of participants are expected to commence benefits as a Life Only annuity, 1/3 as a 100% J&S annuity, and 1/3 as a 5-Year Certain annuity

Commencement for vested terminations Age 62

Contingency fund charge 0.3726% of covered payroll (0.3029% in prior valuation). Details of this calculation are provided in the Preliminary Results report dated June 2016.

Conversion basis For the Contributory Plan, contribution accounts are converted to equivalent monthly benefits using segmented interest rates and the mortality table described above.

Interest earned by employee contributions

Year	Interest rate
2014	2.25%
2015	3.00%
2016	3.75%
2017	4.50%
2018	5.00%
2019 and later	5.50%

These rates are based on five-year bond yields implied from the IRS Funding Yield Curve for April 2014.

Inflation The inflation assumption used to project the maximum salary limitation for future years is 2.2% (previously 3.0%). This assumption is based on the inflation assumption periodically published by Mercer Investment Consulting in their *Capital Markets Outlook* and historical averages.

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Actuarial Methods

An actuarial valuation is only a snapshot of a plan's estimated financial condition at a particular point in time; it does not predict the plan's future financial condition or its ability to pay benefits in the future and does not provide any guarantee of future financial soundness of the plan. Over time, a plan's total cost will depend on a number of factors, including the amount of benefits the plan pays, the number of people paid benefits, the period of time over which benefits are paid, plan expenses and the amount earned on any assets invested to pay benefits. These amounts and other variables are uncertain and unknowable at the valuation date.

Because modeling all aspects of a situation is not possible or practical, we may use summary information, estimates, or simplifications of estimates to facilitate the modeling of future events in an efficient and cost-effective manner. We may also exclude factors or data that, if used, in our judgment, would not have significantly affected our results. Use of such simplifying techniques does not, in our judgment, affect the reasonableness of valuation results for the plan.

Valuations do not affect the ultimate cost of the plan, only the timing of when benefit costs are recognized. Cost recognition occurs over time. If the costs recognized over a period of years are lower or higher than necessary, for whatever reason, normal and expected practice is to adjust future cost levels to recognize the entire cost of the plan over time.

Asset Valuation Method

The asset valuation method is an average of the adjusted market value for each year during the last 2 years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110 percent and no less than 90 percent of the fair market value, as defined in IRC Section 430.

A characteristic of this asset method is that over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

Participant Methods

Participants or former participants are included or excluded from the valuation as described below:

- (a) **Participants included:** Associated Benefits Corporation provides us with data on only those employees who have completed the eligibility requirements so only participants are included in the valuation of the liabilities.
- (b) **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date.
- (c) **Insurance contracts:** The plan does not have any insurance contracts.
- (d) **Transferred participants:** The liabilities for benefits earned prior to their transfer by employees who have transferred to another Associated Benefits Corporation employer

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

have been included with the liabilities for terminated vested participants at their former employer.

- (e) **Nonvested terminated participants:** Benefits for return of employee contributions were estimated for four nonvested terminated participants. These participants are included in the data exhibits as vested terminations.

Actuarial Cost Method

Minimum Funding Method

Target liability for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.
