Appendix B (Continued)

Selection of Assumptions

Information used in the analysis of selecting assumptions include: discount rate – Citi Group yield curve; expected return on assets – review of historical and expected returns on various asset categories held by the plan as well as information provided by the plan’s investment advisor.

The segment rates and mortality table used to determine minimum funding and funded ratios were based on methodology mandated by Internal Revenue Code and rates published by the Internal Revenue Service to affect it.

A complete review of non-economic assumptions, to satisfy ASOP 35, has not been done since the plan was frozen, but we monitor the gains and losses annually to ensure the assumptions are still reasonable.

Changes in Assumptions and Methods since the Last Actuarial Valuation

The segmented interest rates used for determining the funding target were 4.72%, 6.11% and 6.81%. These rates were updated to the rates required for the current plan year under HATFA.

The mortality table for the funding target was changed as required under PPA '06.

Justification for Changes in Actuarial Assumptions

The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any “Change in Actuarial Assumptions.”
