The ultimate cost of a pension plan is the excess of actual benefits and administrative expenses paid over actual net investment return on plan assets during the plan's existence until the last payment has been made to the last participant. The plan's "actuarial cost method" determines the expected incidence of actuarial costs by allocating portions of the ultimate cost to each plan year. The cost method is thus a budgeting tool to help ensure that the plan will be adequately and systematically funded and accounted for. Annual contributions and accounting expense also are affected by the "asset valuation method" (as well as the plan provisions, actuarial assumptions, and actual plan demographic and investment experience each year).

Actuarial Cost Method

The actuarial cost method used for determining the plan's ERISA funding requirements is the unit credit method, as required by the Pension Protection Act of 2006. Under this method, an accrued benefit is determined at each active participant's assumed retirement age based on compensation and service at both the beginning and the end of the current year. The plan's normal cost is the sum of the present value of the excess of each active participant's accrued benefit at the end of the current year over that at the beginning of the current year. The plan's accrued liability is the sum of (a) the present value of each active participant's accrued benefit at the beginning of the current year plus (b) the present value of each inactive participant's future benefits.

The actuarial cost method used for determining the plan sponsor's accounting requirements also is the unit credit method, as required by FASB ASC Topic 715.

Asset Valuation Method

The Actuarial Value of Assets used for determining the plan's ERISA funding requirements is equal to the Adjusted Market Value of Assets minus a decreasing fraction of the investment gain or loss for each of the two immediately preceding plan years, but it cannot be less than 90% nor more than 110% of the Adjusted Market Value of Assets. The expected investment return for a plan year is based on the lesser of the expected rate of return on plan assets (6.5% per year effective January 1, 2016; previously 7% per year) or the applicable statutory interest rate for the year. The expected rate of return on plan assets is based on the plan's investment policy, target asset allocation, and Milliman's capital market expectations.

The Market-Related Value of Plan Assets used for determining the plan sponsor's accounting requirements is equal to the Fair Value of Plan Assets (without inclusion of any contributions receivable).

Changes in Actuarial Methods Since Prior Valuation

None.

Interest Rates

For minimum contribution purposes: Segment rates (based on statutory rates in effect four months prior to beginning of plan year, limited by interest rate stabilization) of 4.16% per year for first 5 years, 5.72% per year for next 15 years, and 6.48% per year thereafter. The equivalent Effective Interest Rate is 5.65% per year.

For maximum deductible contribution purposes: Segment rates (based on statutory rates in effect four months prior to beginning of plan year, not limited by interest rate stabilization) of 1.52% per year for first 5 years, 3.80% per year for next 15 years, and 4.79% per year thereafter. The equivalent Effective Interest Rate is 3.75% per year.

For FASB ASC Topic 715 purposes: Discount rate of 3.54% per year (based on Citigroup Pension Discount Curve and expected benefit payments) and expected long-term rate of return on plan assets of 6.5% per year (based on plan's investment policy, target asset allocation, and Milliman's capital market expectations).

For FASB ASC Topic 960 purposes: Discount rate of 3.54% per (based on Citigroup Pension Discount Curve and expected benefit payments).

Mortality

For contribution purposes: Statutory static tables for 2017 based on RP-2000 Mortality Table projected to anticipate greater future longevity, with separate rates for non-annuitants and annuitants.

For FASB ASC Topics 715 and 960 purposes: RP-2014 Mortality Tables adjusted to reflect Mortality Improvement Scale MP-2016 from 2006 base year and projected forward on a generational basis (based on recommendation of Society of Actuaries' Retirement Plans Experience Committee), with employee rates before benefit commencement and healthy annuitant rates after benefit commencement, and reflecting mortality improvements both before and after the valuation date.

Definitions

Accrued Benefit: The accrued benefit determined under the provisions of the plan as of the earlier of the date of termination of employment or December 31, 1988. A portion of the Accrued Benefit for some participants is provided outside of the plan by annuity contracts with Principal Financial Group. The Accrued Benefit is payable in monthly installments.

Actuarially Equivalent: Equality in value such that the present value of the amount under any form of payment is essentially the same as the present value of the amount under the normal form of annuity payment for single participants. For purposes other than determining lump sum amounts, Actuarially Equivalent factors are based on the 1984 Unisex Pensioners Mortality Table and an 8% interest rate. For purposes of determining lump sum amounts, Actuarially Equivalent factors are based on the applicable mortality table specified in IRS Notice 2016-50 for the Plan Year of distribution and the statutory three-tier segment interest rates in effect for the November prior to the Plan Year of distribution.
