Statement of Actuarial Assumptions and Methods

Interest Rates	24-month segment rates averaged through the end of February 2017 (published in March 2017):		
		Pre Relief	Reflecting Relief
	a. First Rate, Years 1-5	1.62%	4.16%
	b. Second Rate, Years 5-20	3.80%	5.72%
	c. Third Rate, Years 20+	4.75%	6.48%
	d. Effective Interest Rate using the above rates	3.97%	5.81%
	e. Interest rate for developing expected value of assets, (limited by statute at 6.65%)		7.00%
Salary Scale	None applicable.		
Mortality	RP-2000 static, non-generational Mortality Table as described in Regulation 1.430(h)(3) projected by Scale AA, to between 7 and 15 years of the obligation, male and female, with different rates for annuitants and nonannuitants.		
Rates of Retirement	<u>Age</u>	<u>Rate</u>	
	55-59	5%	
	60-61	10	
	62	20	
	63-64	15	
	65+	100	
	Weighted Average Retirement Age is 62. This is the average retirement age for someone eligible to retire at all ages using the assumed retirement rates and no other decrements.		
Rates of Disability	None.		
Rates of Turnover	Not applicable.		
Assumptions Made In Valuing Spouse's Benefit	Sixty percent of the employees included in the valuation are assumed to be married. These percentages are used as the probabilities that survivor benefits will be payable due to preretirement deaths. The wife is assumed to be three years younger than the husband.		
Optional Form Election	All employees are assumed to elect the normal form of benefit.		

Appendix B (Continued)

<i>Provision for Expenses</i>	The expected administrative (i.e. non-investment) expenses that will be paid from plan assets, which were assumed to equal actual expenses during the prior year, were included in the Target Normal Cost for minimum contribution purposes.
<i>Standing Elections</i>	None.
<i>Asset Method</i>	Market Value of Assets plus interest adjusted accrued but unpaid contributions as of the valuation date plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year, minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). Note that due to the regulatory constraint on the interest rate, a characteristic of this asset valuation method is that, over time, it may be more likely to produce an actuarial value of assets that is less than the market value of assets.
<i>Employees Valued</i>	Only participants as of the valuation date were valued.
<i>Selection of Assumptions</i>	Information used in the analysis of selecting assumptions include: expected return on assets – review of historical and expected returns on various asset categories held by the plan as well as information provided by the plan's investment advisor. The segment rates and mortality table used to determine minimum funding and funded ratios were based on methodology mandated by Internal Revenue Code and rates published by the Internal Revenue Service to affect it. A complete review of non-economic assumptions, to satisfy ASOP 35 was done in December 2011.
<i>Changes in Assumptions and Methods since the Last Actuarial Valuation</i>	The segmented interest rates used for determining the funding target were 4.43%, 5.91% and 6.65%. These rates were updated to the rates required for the current plan year and also to reflect BBA. The mortality table for the funding target was changed as required under PPA '06.
<i>Justification for Changes in Actuarial Assumptions</i>	The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any "Change in Actuarial Assumptions."
