Attachment to the 2018 Form 5500 Schedule SB

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

Actuarial Cost Method

The Pension Protection Act (PPA) requires the calculation of the Target Liability and Target Normal Cost. The Target Liability represents the present value of the benefit accumulated as of the valuation date. The present value is calculated by projecting future payments of the accrued benefit, adjusting for probability of receipt according to demographic assumptions, and discounting the payments back to the valuation date using the segment interest rates. Payments made within five years of the valuation date are discounted using the first segment rate, payments made at least five but within 20 years of the valuation date are discounted using the second segment rate, and payments made at least 20 years from the valuation date are discounted using the third segment rate. The calculation of the Target Normal Cost is identical, except that the future payment stream is based on the benefit expected to accrue during the plan year.

Asset Valuation Method

The actuarial assets are determined by a three-point averaging method, averaging the following adjusted asset values:

1. Market value as of January 1, 2016, advanced to the valuation date with 2016 and 2017 benefit payments, expenses, contributions and expected return.
2. Market value as of January 1, 2017, advanced to the valuation date with 2017 benefit payments, expenses, contributions and expected return.
3. Market value as of January 1, 2018.

Discounted contributions made after the valuation date are included in all adjusted asset figures. The assumed rate of return is 7.00%, or the third segment rate for the year if lower. The averaged assets are further adjusted so that the final actuarial assets are no more than 110% and no less than 90% of market value.

Changes since the Prior Valuation

The segment rate changes for minimum funding are as follows: from 4.16% to 3.92% for the first five years, from 5.72% to 5.52% for the next 15 years and from 6.48% to 6.29% for all years thereafter.

The funding mortality table was updated from the IRS 2017 Static Mortality Table, pre-retirement and post-retirement, to the IRS 2018 Static Mortality Table, post-retirement only.

The lump sum mortality table was updated from the IRS 2017 Applicable Mortality Table to the IRS 2018 Applicable Mortality Table.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

Actuarial Cost Method

The Pension Protection Act (PPA) requires the calculation of the Target Liability and Target Normal Cost. The Target Liability represents the present value of the benefit accumulated as of the valuation date. The present value is calculated by projecting future payments of the accrued benefit, adjusting for probability of receipt according to demographic assumptions, and discounting the payments back to the valuation date using the segment interest rates. Payments made within five years of the valuation date are discounted using the first segment rate, payments made at least five but within 20 years of the valuation date are discounted using the second segment rate, and payments made at least 20 years from the valuation date are discounted using the third segment rate. The calculation of the Target Normal Cost is identical, except that the future payment stream is based on the benefit expected to accrue during the plan year.

Asset Valuation Method

The actuarial assets are determined by a three-point averaging method, averaging the following adjusted asset values:

1. Market value as of January 1, 2016, advanced to the valuation date with 2016 and 2017 benefit payments, expenses, contributions and expected return.
2. Market value as of January 1, 2017, advanced to the valuation date with 2017 benefit payments, expenses, contributions and expected return.
3. Market value as of January 1, 2018.

Discounted contributions made after the valuation date are included in all adjusted asset figures. The assumed rate of return is 7.00%, or the third segment rate for the year if lower. The averaged assets are further adjusted so that the final actuarial assets are no more than 110% and no less than 90% of market value.

Changes since the Prior Valuation

The segment rate changes for minimum funding are as follows: from 4.16% to 3.92% for the first five years, from 5.72% to 5.52% for the next 15 years and from 6.48% to 6.29% for all years thereafter.

The funding mortality table was updated from the IRS 2017 Static Mortality Table, pre-retirement and post-retirement, to the IRS 2018 Static Mortality Table, post-retirement only.

The lump sum mortality table was updated from the IRS 2017 Applicable Mortality Table to the IRS 2018 Applicable Mortality Table.
