ACTUARIAL ASSUMPTIONS AND METHODS

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

Actuarial Cost Methods

Funding Target Liability: As required by PPA, the Traditional Unit Credit Cost Method is used.

Actuarial Value of Assets: Market Value, as provided by the Trustee.

Funding Target Liability

Valuation Date: December 31, 2018

Demographic Information: The demographic information was provided as of December 31, 2018 by Allan E Beyda, MD and Bernadette Beyda, MD. Although we did not audit the data, we did review the data for reasonableness.

Interest Rates for Minimum Required Contribution: The adjusted 24-month average December 2018 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h), MAP-21, and HATFA.

Segment	Interest Rate
Segment 1	3.92%
Segment 2	5.52%
Segment 3	6.29%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Effective Interest Rate: 5.50%

Interest Rates for Maximum Alternative Contribution: The December 2018 funding segment rates were utilized as prescribed by IRC Section 430(h), and elected by Allan E Beyda, MD and Bernadette Beyda, MD.

Segment	Interest Rate
Segment 1	2.50%
Segment 2	3.92%
Segment 3	4.50%

Rate of Compensation Increase: Salaries are assumed to remain constant until retirement.

Retirement Rates: Employees were assumed to retire at normal retirement age (the later of age 65 or the fifth anniversary of initial entry to the plan).

Post-retirement Mortality: The base mortality tables are the blended sex distinct RP-2014 mortality tables, adjusted backward to 2006 with Scale MP-2014. The base mortality table is adjusted by projecting mortality improvements using Scale MP-2016 from the year 2006 through 2018, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

Administrative Expenses: Actual plan expenses, not including investment advisory fees, paid out of the trust during the plan year - \$0.

Form of Benefit: 100% of active and terminated vested participants are assumed to receive an immediate lump sum distribution at their assumed retirement age. Lump sums are valued in accordance with Internal Revenue Regulation 1.430(d)-1(f)(4)(iii).

Interest Rates to Value Lump Sums for Minimum Required Contribution Using Annuity Substitution Under 1.430(d)-1(f)(4)(iii)(B): The adjusted 24-month average December 2018 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h), MAP-21, and HATFA.

Segment	Interest Rate
Segment 1	3.92%
Segment 2	5.52%
Segment 3	6.29%

Interest Rates to Value Lump Sums for Maximum Alternative Contribution Using Annuity Substitution Under 1.430(d)-1(f)(4)(iii)(B): The December 2018 funding segment rates were utilized as prescribed by IRC Section 430(h) and elected by Allan E Beyda, MD and Bernadette Beyda, MD.

Segment	Interest Rate
Segment 1	2.50%
Segment 2	3.92%
Segment 3	4.50%

Mortality to Value Lump Sums Using Annuity Substitution Under 1.430(d)-1(f)(4)(iii)(B): The prevailing Commissioner's standard mortality table (described in Internal Revenue Code Section 807(d)(5)(a)). This table is currently a 50/50 blend of male and female rates from the 2018 sex distinct mortality table for annuitants and non-annuitants, as prescribed.

Interest Rate to Convert Annuities to Actuarially Equivalent Lump Sum Amounts Under 1.430(d)-1(f)(4)(iii)(D): 6.00% per annum, compounded annually, as defined in the plan document.

Mortality to Convert Annuities to Actuarially Equivalent Lump Sum Amounts Under 1.430(d)-1(f)(4)(iii)(D): GAR '94 Unisex, as defined in the plan document.

Schedule SB, line 15 Reconciliation of difference between valuation results and amounts used to calculate AFTAP

Allan E Beyda, MD and Bernadette Beyda, MD Defined Benefit Plan EIN/PN: 11-3501695/004 Plan Year ending December 31, 2018

The percentage shown on line 15 is equal to the sum of the market value of assets on the valuation date and the discounted value of contributions received for the current plan year after the valuation date, divided by the sum of the current year's funding target and target normal cost

Attachment to 2018 Schedule SB, Line 22 - Description of Weighted Average Retirement Age EIN: 11-3501695 PN: 004

ALLAN E BEYDA, MD AND BERNADETTE BEYDA, MD DEFINED BENEFIT PLAN

Weighted Average Retirement Age Plan Year: 1/1/2018 to 12/31/2018 Valuation Date: 12/31/2018

Assumed Retirement Age - 100% of the participants are assumed to retire at the date the plan's normal retirement age is attained, which is defined as:

The later of:

Attainment of age 65 Completion of 5 years of participation from entry date

Participants who have passed their Normal Retirement Date as defined above are assumed to retire on the valuation date.

Weighted average retirement age 67

This summary is intended as an outline of plan provisions and does not alter the intent or meaning of the provisions contained in the plan document.

Effective Date of Plan	December 31, 2004
Date of Last Amendment	Plan restatement effective January 1, 2019 executed December 17, 2018.
Eligibility	All Non-Union Employees of the company are eligible for participation under the plan on the January 1st or July 1st coincident with or next following the completion of 2 Years of service and age 21.
Normal Retirement Date (NRD)	The first day of the month on or next following the later of a participant's 65 th birthday and the fifth anniversary of entering the Plan.
Normal Retirement Benefit	A pension benefit equal to 39% of Average Compensation plus 26.25% of Average Excess Compensation prorated for less than 35 Benefit Years of Service.
Deferred Retirement Benefit	Upon retirement after Normal Retirement Date, the benefit is the Normal Retirement Benefit calculated as of the Deferred Retirement Date reflecting salary and service to such date, or an actuarial increase in benefits from Normal Retirement Date to Deferred Retirement Date if greater.
Average Compensation	The average of the total compensation during the three consecutive calendar years of employment producing the highest average.
Accrued Benefit Prior to Normal Retirement Date	The benefit as described under Normal Retirement Benefit multiplied by a fraction; the numerator being benefit service to date and the denominator being benefit service to NRD.
Vested Termination	A participant is 100% vested upon entering the Plan.
Termination Benefit	A deferred benefit commencing at Normal Retirement Date equal to the Accrued Benefit.
Pre-Retirement Death Benefit	The actuarial equivalent of the accrued benefit, computed as of the date of death.
Normal Form of Retirement Benefit	Benefits are determined on a life annuity form of benefit. However, if a participant is married and does not otherwise elect, the normal form of benefit payment will be an actuarially reduced joint and 50% survivor annuity. Various optional forms of benefit may be elected.

Allan E Beyda, MD and Bernadette Beyda, MD Defined Benefit Plan Schedule SB, Line 32 - Schedule of Amortization Bases EIN/PN: 11-3501695/004

Amortization Schedule as of December 31, 2018								
Year				Remaining	Re	emaining		Annual
