	Unconstrained Rates*	Rates Reflecting Corridor**
First Segment Rate	1.75%	3.92%
Second Segment Rate	3.76%	5.52%

* Used for maximum tax-deduction purposes.

** Used for minimum funding and benefit restriction purposes.

Mortality

Mortality tables mandated by PPA as specified in IRS Regulation 1.430(h)(3)-1 as revised in October 2017, applied on a static basis, using the blended annuitant/non-annuitant table applicable to small plans.

Actuarial cost method

The Funding Target is the present value of accrued benefits based on compensation and service to date. The Target Normal Cost is the present value of benefits expected to be accrued during the current plan year, reflecting the effect of expected compensation increases during the year and including expected plan administrative expenses to be paid from plan assets during the year.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods (continued)

Non-Prescribed Funding Assumptions and Methods

The following assumptions were selected by the plan's enrolled actuary. The assumptions are based on plan experience and plan sponsor guidance and are reviewed periodically. The asset valuation method was selected by the plan sponsor with the actuary's advice and is an acceptable method under PPA.

Expenses

Plan sponsor does not expect to pay administrative expenses from the plan trust during 2018.

Frequency of optional payment forms

100% of single participants are assumed to elect a Single Life Annuity. 100% of married participants are assumed to elect an unreduced 75% Joint and Survivor Annuity.

Marital percentage

88% of participants are assumed to be married at death. Husbands are assumed to be 3 years older than their wives.

Retirement rates

Retirement rates are based on a 2011 Buck study of retirements by employees in the stevedoring industry.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods (continued)

Non-Prescribed Funding Assumptions and Methods (continued)

Withdrawal rates for active participants not eligible for retirement

None.

Asset valuation method

The Actuarial Value of Assets is market value as of the valuation date, including discounted receivable contributions, reduced by 2/3 and 1/3 of the gain/(loss) in each of the prior 2- years, respectively. The gain/(loss) for each period is determined as the actual return on market value during the period less the expected return on market value based on an assumed earnings rate chosen by the actuary but required by PPA to be not greater than the applicable third Segment Rate. The resulting value is constrained to be within a corridor of 90% to 110% of market value, including discounted receivable contributions.

The Actuary's Assumption is consistent with the expected long-term rate of return selected by the plan sponsor for accounting purposes. This assumption is based on the plan sponsor's estimate of long-term future experience, taking into account asset allocation and historical and expected plan experience.

	Actuary's Assumption	Third Segment Rate	Reflecting PPA Limit
2018 Expected Return	7.50%	6.29%	6.29%
2017 Expected Return	7.50%	6.48%	6.48%
2016 Expected Return	7.50%	6.65%	6.65%

Future actuarial measurements

Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the economic and demographic assumptions, changes expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions, applicable law or regulations. An analysis of the potential range of such future differences is beyond the scope of this report.

Summary of Changes from the January 1, 2017 Valuation

- The segment interest rates with four-month lookback used for funding purposes were updated to the current valuation date. These rates are constrained in accordance with relevant legislation.
- The mortality tables used for funding purposes were updated with projections specified by IRS Regulation 1.430(h)(3)-1, as revised in October 2017.
- The changes in assumptions listed above increased the Funding Target by approximately \$744,000.

For 2017 Plan Year: Segment Rates with four-month lookback, constrained in accordance with relevant legislation as follows:

	Unconstrained Rates*	Rates Reflecting Corridor**
First Segment Rate	1.52%	4.16%
Second Segment Rate	3.80%	5.72%
Third Segment Rate	4.79%	6.48%
Effective Rate	4.34%	6.08%

* Used for maximum tax-deduction purposes.

** Used for minimum funding and benefit restriction purposes.

Mortality

Mortality tables mandated by PPA as specified in IRS Regulation 1.430(h)(3)-1 as revised in October 2017, applied on a static basis, using the blended annuitant/non-annuitant table applicable to small plans.

Actuarial cost method

The Funding Target is the present value of accrued benefits based on compensation and service to date. The Target Normal Cost is the present value of benefits expected to be accrued during the current plan year, reflecting the effect of expected compensation increases during the year and including expected plan administrative expenses to be paid from plan assets during the year.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods (continued)

Non-Prescribed Funding Assumptions and Methods

The following assumptions were selected by the plan's enrolled actuary. The assumptions are based on plan experience and plan sponsor guidance and are reviewed periodically. The asset valuation method was selected by the plan sponsor with the actuary's advice and is an acceptable method under PPA.

Expenses

Plan sponsor does not expect to pay administrative expenses from the plan trust during 2018.

Frequency of optional payment forms

100% of single participants are assumed to elect a Single Life Annuity. 100% of married participants are assumed to elect an unreduced 75% Joint and Survivor Annuity.

Marital percentage

88% of participants are assumed to be married at death. Husbands are assumed to be 3 years older than their wives.

Retirement rates

Retirement rates are based on a 2011 Buck study of retirements by employees in the stevedoring industry.

Withdrawal rates for active participants not eligible for retirement

Asset valuation method

The Actuarial Value of Assets is market value as of the valuation date, including discounted receivable contributions, reduced by 2/3 and 1/3 of the gain/(loss) in each of the prior 2- years, respectively. The gain/(loss) for each period is determined as the actual return on market value during the period less the expected return on market value based on an assumed earnings rate chosen by the actuary but required by PPA to be not greater than the applicable third Segment Rate. The resulting value is constrained to be within a corridor of 90% to 110% of market value, including discounted receivable contributions.

The Actuary's Assumption is consistent with the expected long-term rate of return selected by the plan sponsor for accounting purposes. This assumption is based on the plan sponsor's estimate of long-term future experience, taking into account asset allocation and historical and expected plan experience.

	Actuary's Assumption	Third Segment Rate	Reflecting PPA Limit
2018 Expected Return	7.50%	6.29%	6.29%
2017 Expected Return	7.50%	6.48%	6.48%
2016 Expected Return	7.50%	6.65%	6.65%

Future actuarial measurements

Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the economic and demographic assumptions, changes expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions, applicable law or regulations. An analysis of the potential range of such future differences is beyond the scope of this report.

Summary of Changes from the January 1, 2017 Valuation

- The segment interest rates with four-month lookback used for funding purposes were updated to the current valuation date. These rates are constrained in accordance with relevant legislation.
- The mortality tables used for funding purposes were updated with projections specified by IRS Regulation 1.430(h)(3)-1, as revised in October 2017.
- The changes in assumptions listed above increased the Funding Target by approximately \$744,000.

The lump sum form of payment is calculated as the present value of the accrued benefit payable at Normal Retirement Date (or actual retirement date, if later), using the Internal Revenue Code Section 417(e)(3) assumptions with a lookback month for the applicable interest rate of the November in the preceding plan year. The minimum lump sum payment under a Disability Retirement Benefit is the Basic Retirement Income monthly benefit multiplied by 90.

The Supplemental Retirement Benefit commencing before attainment of age 62 is determined using the 1971 Group Annuity Mortality Table set back one year and an interest rate of 6.0% per year.

The lump sum form of payment is calculated as the present value of the accrued benefit payable at Normal Retirement Date (or actual retirement date, if later), using the Internal Revenue Code Section 417(e)(3) assumptions with a lookback month for the applicable interest rate of the November in the preceding plan year. The minimum lump sum payment under a Disability Retirement Benefit is the Basic Retirement Income monthly benefit multiplied by 90.

The Supplemental Retirement Benefit commencing before attainment of age 62 is determined using the 1971 Group Annuity Mortality Table set back one year and an interest rate of 6.0% per year.
