ACTUARIAL METHODS

Asset Methods

The asset valuation method is an average of the adjusted market value for each month/quarter/year during the last 2 years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110% and no less than 90% of the fair market value, as defined in IRC Section 430.

A characteristic of this asset method is that, over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

Participant Methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.

- **Participants excluded:** No actuarial liability is included for non-vested participants who terminated prior to the valuation date. For this purpose, participants with a break in service on the valuation date are treated as terminated participants.

Minimum Funding Methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods

the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:
The plan's valuation date is the beginning of the plan year.

- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual are the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.

SUPPLEMENTAL RETIREMENT BENEFIT (BRIDGE BENEFIT)	
• Eligibility	• Age 55 and 30 years of service, or • Age 60 and 5 years of service.
• Benefit	Lesser of: (1) $400 per month, or (2) $24,000 divided by the number of months between participant's age (in completed years and months) as of annuity starting date and his Social Security Full Retirement Age. Supplemental retirement benefits shall cease upon the earlier of participant's death or attainment of Social Security Full Retirement Age.

• Eligibility	Married at least 1 year, with a vested benefit or eligible for retirement.

If the participant's death occurs before the normal retirement date, this benefit is deferred until the date the participant would have reached age 65 (or if the participant had at least 5 years of service at death, at the spouse's election, any time after the date the participant would have reached age 55).
