Appendix B (Continued)

Rates of Retirement

Terminated Vested participants are assumed to retire based on age as follows:

<u>Age</u>	<u>Rate</u>
55-59	5%
60-61	10
62	20
63-64	15
65+	100

Weighted average retirement age is 62. This is the average retirement age for someone eligible to retire at all ages using the assumed retirement rates and no other decrements.

Deferred Beneficiaries are assumed to commence at Normal Retirement Date.

Assumptions Made In Valuing Spouse's Benefit

60% of the employees included in the valuation are assumed to be married. This percentage is used as the probability that survivor benefits will be payable due to preretirement deaths. The wife is assumed to be three years younger than the husband.

Optional Form Selection

All employees are assumed to elect the normal form of benefit.

Provision for Expenses

The expected administrative (i.e. non-investment) expenses expected to be paid from plan assets for the upcoming year, which were assumed to equal actual expenses during the prior year, were included in the Target Normal Cost for Minimum Required Contribution purposes.

Standing Elections

None.

Asset Method

Market Value of Assets plus interest adjusted accrued but unpaid contributions as of the valuation date plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year, minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). Note that due to the regulatory constraint on the interest rate, a characteristic of this asset valuation method is that, over time, it may be more likely to produce an actuarial value of assets that is less than the market value of assets.

Employees Valued

Only participants as of the valuation date were valued.

Appendix B (Continued)

Funding Method	Pure Unit Credit
Changes in Assumptions and Methods since the Last Actuarial Valuation	<p>The interest rates used for determining the funding target were 3.92%, 5.52% and 6.29%. These rates were updated to the rates required for the current plan year.</p> <p>The mortality table for the funding target was changed as required by Notice 2018-2.</p>
Justification for Changes in Actuarial Assumptions	<p>The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any “Change in Actuarial Assumptions.”</p>
