Rates of Retirement All participants are assumed to retire at age 65.

Weighted Average Retirement Age is 65. This is the average retirement age for someone eligible to retire at all ages using the assumed retirement rates and no other decrements.

Rates of Turnover Based on the Crocker-Sarason T-5 Table with sample rates below:

<u>Age</u>	<u>Rate</u>
20	7.938%
30	7.222
40	5.150
50	2.563
60	0.090

Rates of Disability None.

Assumptions Made In Valuing Spouse's Benefit Eighty percent of all employees included in the valuation are assumed to be married. These percentages are used as the probabilities that survivor benefits will be payable due to preretirement deaths. The wife is assumed to be three years younger than the husband.

Optional Form Selection 90% of benefits are assumed to be lump sums, with the remaining 10% being the normal annuity form.

Annual Increases to Maximum Benefits and Plan Compensation Limits 0.00%

Annual Increases to Social Security N/A

Provision for Expenses The expected non-investment related expenses expected to be paid from plan assets for the upcoming year were included in the Target Normal Cost for Minimum Required Contribution purposes.

Appendix B (Continued)

Standing Elections	The client has not signed an election that provides for the automatic use of the Carryover Balance and/or Prefunding Balance if necessary to meet the minimum funding requirement.
Asset Method	Market Value of Assets plus interest adjusted accrued but unpaid contributions as of the valuation date plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year, minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). Note that due to the regulatory constraint on the interest rate, a characteristic of this asset valuation method is that, over time, it may be more likely to produce an actuarial value of assets that is less than the market value of assets.
Funding Method	Pure Unit Credit
Employees Valued	Only participants as of the valuation date were valued.
Changes in Assumptions and Methods since the Last Actuarial Valuation	<p>The interest rates used for determining the funding target were 3.92%, 5.52% and 6.29%. These rates were updated to the rates required for the current plan year.</p> <p>The mortality table for the funding target was changed as required under PPA '06.</p>
Justification for Changes in Actuarial Assumptions	The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any "Change in Actuarial Assumptions."
