ACTUARIAL ASSUMPTIONS AND METHODS

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

Actuarial Cost Methods

Funding Target Liability: As required by PPA, the Traditional Unit Credit Cost Method is used.

Actuarial Value of Assets: Market Value, as provided by the Trustee.

Funding Target Liability

Valuation Date: January 1, 2021

Demographic Information: The demographic information was provided as of January 1, 2021 by Ohio Valley Nephrology Associates PSC. Although we did not audit the data, we did review the data for reasonableness.

Actuarial Valuation Software: For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ASC software platform developed by Actuarial Systems Corporation. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

Interest Rates for Minimum Required Contribution: The adjusted 24-month average January 2021 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h), MAP-21, HATFA, and ARPA.

Segment	Interest Rate
Segment 1	4.75%
Segment 2	5.36%
Segment 3	6.11%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Effective Interest Rate: 5.22%

Interest Rates for Maximum Alternative Contribution: The January 2021 funding segment rates were utilized as prescribed by IRC Section 430(h), and elected by Ohio Valley Nephrology Associates PSC.

Segment	Interest Rate
Segment 1	1.75%
Segment 2	3.04%
Segment 3	3.65%

Projected Cash Balance Interest Crediting Rate: 3.04%, the 2nd funding segment rate.

Rate of Compensation Increase: Salaries are assumed to remain constant until retirement.

Retirement Rates: Employees were assumed to retire at normal retirement age (the later of age 65 or the fifth anniversary of initial entry to the plan).

ACTUARIAL ASSUMPTIONS AND METHODS

Post-retirement Mortality: The base mortality tables are the sex distinct RP-2014 mortality tables for healthy annuitants, adjusted backward to 2006 with Scale MP-2014. The base mortality table is adjusted by projecting mortality improvements using Scale MP-2019 from the year 2006 through 2021, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

Administrative Expenses: Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year, rounded to the nearest thousand dollars - \$0.

Form of Benefit: 100% of active participants are assumed to receive a deferred lump sum distribution at their assumed retirement age. 100% of terminated vested participants are assumed to receive an immediate lump sum distribution.
