Actuarial Cost Method Unit Credit Cost Method

The use of this actuarial cost method is required by section 430 of the Internal Revenue Code. Under this method, the actuarial present value of benefits allocated to the current year is called the Target Normal Cost, and the actuarial present value of benefits allocated to all periods prior to the current year is called the Funding Target.

Schedule SB, Line 22 – Weighted Average Retirement Age

All participants were assumed to retire at the plan's Normal Retirement Age, which is the first day of the month coincident with or next following the attainment of age 65. Participants who remain employed beyond their Normal Retirement Age are assumed to retire one (1) year after the valuation date.

The Weighted Average Retirement Age was determined by multiplying each participant's assumed retirement age by the sum of his or her Funding Target plus Target Normal Cost. The sum of each of these products was then divided by the total Funding Target plus Target Normal Cost to obtain the average assumed retirement age. The average assumed retirement age was calculated to be 67.48 and then rounded to the nearest whole number to determine the Weighted Average Retirement Age.

For purposes of Line 22, the weighted average retirement age of all the participants is 67.
