**THE PRINCE HOUSTON GROUP
CASH BALANCE PLAN**

EIN/PN: 32-0273368 / 002

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

- a. Mortality: The 2022 Static Mortality Tables (with no projection for mortality improvement) were used. The optional combined tables for small plans were used, separately for male and female lives.
- b. Interest: Benefits were discounted by 4.75% (first segment rate) for payments expected from January 1, 2022 – December 31, 2026, by 5.18% (second segment rate) for payments expected from January 1, 2027 – December 31, 2041, and by 5.928% (third segment rate) for payments expected on or after January 1, 2042. These are the Segment Rates prescribed by IRC Section 430(h)(2)(C) for the 2022 Plan Year. For calculations under IRC Section 404(o)(2), the following segment rates applied: 0.88%, 2.62% and 3.27%.
- c. Salary Scale: No salary scale was used in the determination of costs and liabilities since plan benefits are not directly or effectively dependent on salaries.
- d. Severance of Employment: No discount for severance of employment was included in the determination of costs and liabilities due to the small number of participants and lack of credible plan experience
- e. Assumed Retirement Age: It was assumed that all employees would retire at their Normal Retirement Age. It was determined that the effect of alternative retirement rates would not be significant since there are no subsidized benefits payable prior to normal retirement.
- f. Disability Retirement: No discount for disability retirement was included in the determination of costs and liabilities due to the lack of any actuarially subsidized benefit or credible plan experience.
- g. Form of Benefit Payment: It was assumed that there would be a 100% probability of electing lump sum payments. This assumption has been based on actual plan experience.
- h. Actuarial Value of Asset Valuation Method: The fair market value of assets was used.
- i. Expenses: The Target Normal Cost was increased by \$0 to reflect anticipated expenses to be paid from the plan in the current year.
- j. Actuarial Cost Method: The method prescribed by IRC Section 430 was used which determines a minimum required contribution equal to the sum of the plan's Target Normal Cost for the plan year, plus a Shortfall Amortization charge (if any) and Waiver Amortization charge (if any) of a prior funding deficiency.
- k. Interest Crediting Rate: Based on average applicable rate during the current and last 4 plan years, which was 2.40%.

Participants Included: Those expected to meet eligibility requirements by the end of the Plan

- l. Year.
