Actuarial Assumptions and Methodologies

Certain assumptions are prescribed as noted below. The other assumptions are estimates derived from historical and recent experience as well as market observations, combined with professional judgment about future expectations. Segal's report as of December 2017 shows a recent analysis upon which these assumptions are based.

Interest:

The interest rates used for the 2022 plan year are the 24-month average corporate bond segment rates for September 2021 (a 4-month lookback) subject to funding stabilization. Under stabilization, the interest rates used for funding purposes are calculated in the usual manner (24-month average corporate bond rates) but are then constrained to be within a corridor around a 25-year average of those same bond rates. Each of the three segments of the yield curve reflecting the 25-year average rates is constrained to be no less than 5%. For 2022, the stabilization corridor is 5%. It will remain at 5% through 2030 and then increase by 5% per year beginning in 2031 until it reaches 30% for 2035. The interest rate description above reflects that the plan sponsor elected to apply the ARPA provisions beginning with the 2022 plan year. The rates are as follows:

	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter	Effective Interest Rate
Current Year, reflecting stabilization (post-ARPA)	4.75%	5.18%	5.92%	5.30%
Current Year, without stabilization	1.07%	2.68%	3.36%	2.74%
Prior Year, reflecting stabilization (pre-ARPA)	3.32%	4.79%	5.47%	4.80%
Prior Year, without stabilization	2.22%	3.38%	3.92%	3.43%

The interest rates used to determine the PBGC variable-rate premium are:

	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter
Current Year	1.16%	2.72%	3.10%
Prior Year	0.51%	2.26%	3.01%

These interest rates are based on the plan sponsor's election for the 2009 plan year (an election that can next be changed for the next plan year) and are subject to the constraints established by law.

Mortality Rates

RP-2006 combined employee and annuitant healthy mortality tables, projected through the valuation date plus a number of years that varies by age, using scale MP-2020.

This assumption is one of the choices allowed by the regulations.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods
Revised Pension Plan for Hourly-Rated Employees of L3Harris Cincinnati Electronics Corporation
EIN 34-0276860 PN 025

Benefit Election	Life annuity for unmarried participants. 50% joint and survivor for married participants. This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.	
Termination Rates	None. In light of low number of active participants, the plan provisions and professional judgment, these assumed rates reflect a reasonable expectation for the future.	
Disability Rates	None. In light of low number of active participants, the plan provisions and professional judgment, these assumed rates reflect a reasonable expectation for the future.	
Retirement (From Active Status) Rates	Age	Rates
	65	25.00%
	66-69	20.00
	70	100.00
	Based on a review of the assumed rates compared to historical experience, in light of the plan provisions and professional judgment, these assumed rates reflect a reasonable expectation for the future.	
Description of Weighted Average Retirement Age	Age 68, determined as follows: The weighted average retirement age for each participant is calculated as the sum of the product of each potential current or future retirement age times the probability of surviving to that age and then retiring at that age, assuming no other decrements.	
Percent Married	70% for male participants, 55% for female participants. Spouse is assumed to be the opposite gender.	
Age Difference	For inactive participants for whom a spouse's date of birth was not provided, and for all active participants, it was assumed husbands were three years older than their wives.	
Administrative Expenses	An expense assumption is required under the funding rules. Plan-related expenses of \$100,000 are expected to be paid by the plan during the year. (Previously, \$140,000 was assumed.) This assumption is based on recent historical data, adjusted to reflect estimated future experience and professional judgment.	
Asset Method	As selected by the plan sponsor, assets are determined by averaging the market value as of the valuation date and the adjusted market values as of the preceding two years. The resulting value is limited to between 90% to 110% of market value of assets. The adjusted market values reflect cash flow and expected earnings to the valuation date. The expected earnings are based on an assumed rate of return of 7.75% for 2020 and 7.50% for 2021, not to exceed the applicable third segment rate of 5.94% for 2020 and 5.47% for 2021.

Funding Method	<p>Funding method is unit credit actuarial cost method, as prescribed by law. The liability is measured on an accrual-to-date basis using mandated mortality tables and interest rates with no salary projection past the end of the year.</p> <p>If all assumptions are met (including the investment earnings implicitly assumed by the interest rate), funding the plan at the minimum required contribution level is generally designed to achieve a 100% funded status within fifteen years. Once that is achieved, or for overfunded plans, the required contribution will generally equal the target normal cost reduced by any overfunding.</p>			
Non-Prescribed Assumption Changes Since Prior Valuation	Assumption Types:	Current Assumptions:	Prior Assumptions:	Reason for Changes:
	Administrative Expenses	\$100,000	\$140,000	Experience
Actuarial Models	<p>Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprising both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.</p>
