Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
Waterbury Hospital Cash Balance Retirement Plan
EIN 81-2181470 Plan No. 005

Assumptions prescribed by law

Mortality

During benefit payment period

IRS Prescribed Mortality - Static Annuitant, male and female.

Before benefit payment period

IRS Prescribed Mortality - Static Non-annuitant, male and female.

Assumptions selected by actuary

Inflation

2.25% increase per year.

Our long-term inflation assumption considered the current economic environment, recent and historical data, and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office, and Survey of Professional Forecasters. See Long-Term Capital Market Assumptions link.

Asset return

2.00% for the current plan year.

The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.

Expected expense

The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets, with an updated estimate of PBGC premiums. This is the best estimate available of upcoming year's expenses.

Retirement

Active participants

Age	Probability of retirement
55-63	2%
64-69	20%
70	remaining participants

Inactive participants

Age	Probability of retirement
55-64	15%
65-69	25%
70	remaining participants

This assumption is based on the results of recent experience analysis and anticipated future experience.

Upcoming year salary increase	The preceding year's salary is increased by 3.50% at each age. Note: not used for Plan accounting calculations. Expected salary increase is composed of salary inflation, a real wage growth and a merit increase. This reflects company salary increase philosophies along with more recent experience of the plan participants.
Disability	None. This plan does not offer a subsidized disability benefit therefore the disability assumption is built into the withdrawal assumption.
Marriage	Not applicable as cash balance account is payable upon death.
Withdrawal	2003 Society of Actuaries Small Plan Age Table, multiplied by 1.60. We rely on a publicly published table due to the limited size of the plan. The SOA Small Plan Age Table is the most recent withdrawal experience table published by the Society of Actuaries. A multiplier of 1.60 is applied to this table to reflect the results of the most recent experience analysis and anticipated future experience.
Compensation limit increase	2.25% increase per year used in the calculation of the IRC 404 maximum deduction cushion. See <u>Calculated deduction</u> in Rules and regulations. Compensation limit increase is consistent with the inflation assumption.
Form of benefit and basis	80% of active participants will elect a benefit paid in a lump sum at the assumed retirement ages equal to their cash balance account. The remaining active participants will elect a monthly annuity on the normal form at the assumed retirement age. 90% of active participants who terminate before the earliest assumed retirement age are assumed to receive a single sum equal to their cash balance account at the earliest age they become eligible. 90% of inactive participants will elect a benefit paid in a lump sum at the assumed retirement ages. The remaining inactive participants will elect a monthly annuity on the normal form at the assumed retirement age. This assumption is based on the results of recent experience analysis and anticipated future experience. The single sum benefit is based on the Applicable Mortality and the plan's funding target interest rates, as prescribed.

Cash balance interest crediting rate	1.00% Our forward-looking expected yield for 3-year treasury is about 1.95%. See more details on forward looking expectations on Treasury yields in the Long Term Capital Market Assumptions link.
Methods prescribed by law	
Lump sum payments	Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance. These rates are currently higher than the actual rates used to determine lump sum distributions. Therefore, plan liabilities do not currently recognize this additional cost and this may result in the plan not accumulating adequate assets. You may wish to consider additional contributions.
Liability measure	Funding target is the present value of the benefits accrued on the valuation date. Target Normal Cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.
HCE benefit payment restrictions	A ratio of the plan assets and accrued liability is used to determine if restrictions apply. Assets and accrued liability are as of the valuation date and are reduced by: - any retiree benefit index or floor - amounts for HCEs who were previously restricted - an amount for the retiring HCE The estimated HCE ratio illustrated in this report is based on the market value of plan assets (excluding late deposits) and funding target as of the valuation date. The funding target uses the non-stabilized interest rates as defined in IRC §430(h)(2)(C)(iv). Other assumptions or methods could be used.
Methods selected by plan sponsor	
Asset method	The asset valuation method is prescribed by law for plans that elect to use a value other than market value. For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years. The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value. When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market

value.

Segment rates

24-month average with no weighting to prior law basis. Use rates where November is the last month included in the average.

PBGC premium basis

Variable Rate Premiums are calculated using census, market value of assets and interest rates in effect on the current valuation date. Interest rates are the 24-month average rates used for annual cost but without the interest rate corridor defined in IRC §430(h)(2)(C)(iv). You elected this Alternative interest method for the 01/01/2020 plan year and this method must be used for five years before a change can be made.

Methods elected by actuary

Retirees

Assets and liabilities for current and future retirees are included.

Vested benefits

A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.

The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan's regular funding target and target normal cost.

Mortality

Based on Pri-2012 Blue collar base rate mortality table projected generationally using the using the Principal Mortality Improvement Scale (Principal 2017-10).

Base rates

Before benefit payment period

Employee amount-weighted, male and female

During benefit payment period

Retiree amount-weighted, male and female

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The Blue collar base rate table was selected based on information provided by the plan sponsor.

Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe "Approach 1" is reasonable for this plan.

Mortality improvement (MI)

Principal 2017-10 MI scale; this scale is based on MP-2021 study and model issued by SOA with the exception of the following user-selected assumptions:

10-year convergence period on age and cohort

Long-term rates (LTR) assumptions using sex-distinct and age-based rates developed from Social Security Trustees Reports.

See [Mortality Documentation](#) for rationale and additional information.

Interest rate used to value liabilities

2.00%

The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.

Treatment of administrative expenses

No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

Annuity conversion basis

Interest rate

Based on the three segment yield curve: 3.05%/3.45%/4.35%

The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high quality corporate bond yields. According to our most recent study, the long-term expected yields for short/intermediate/long corporate bonds are 3.05%/3.45%/4.35%. For details, see Corporate AA yield in Figure 2 of Long-Term Capital Market Assumptions link.

Mortality

We have selected the same mortality assumption for lump sum payments, but with a 50/50 blend of male and female total dataset base rates and mortality improvement scales. This reflects the IRS practice of defining lump sum mortality on a unisex basis.

EIN 81-2181470 Plan No. 005

The market value of assets on line 2a does not equal assets shown on Schedule H, Schedule I or Form 5500-SF. Schedule H, Schedule I and Form 5500-SF use the full value of contributions received after plan year end. Line 2a includes the value of \$521,502 contributions received after the plan year end with a discounted value of \$513,702.

Schedule SB, Line 22 - Description of Weighted Average Retirement Age
Waterbury Hospital Cash Balance Retirement Plan
EIN 81-2181470 Plan No. 005

The weighted average retirement age is weighted by the expected percentage of active participants retiring at each age. The retirement rate reflects only those participants who meet retirement eligibility. An active participant working past assumed retirement age is expected to retire at current age.

Definitions

Allocation dates	Dates as of which prior plan transfer credits, employer contribution credits, and interest credits are allocated to participant accounts. There are two allocation dates for employer contribution credits and interest credits; June 30 and December 31. There shall be one allocation date for the prior plan transfer credit; 7/1/1994.
-------------------------	--

Allocation periods	Six month periods ending June 30 and December 31.
Employer contribution credit	3% of compensation for the allocation period. Effective 1/1/2020, 1.5% of compensation for the allocation period. 6% of compensation for the allocation period if participant had elected to transfer his benefit from the prior plan to this plan.
Interest credit	On each allocation date the rate shall be 50% of the yield to maturity on 3-year treasury bills in effect for the November preceding the calendar year of the allocation date.
Prior plan transfer credit	The amount allocated on 7/1/1994 to the participant's account balance which is equal to the amount transferred to this plan from the prior plan.
Optional forms of benefit payments	The optional forms of benefit payments are: Monthly annuity payable for life, or 10 years certain and life. Monthly annuity payable as a survivorship life annuity with survivorship percentages of 50, 75 or 100. Single sum payment equal to the account balance. The optional form conversion basis uses the applicable interest rate and applicable mortality table as set forth in Code Section 417 for lump sum payments. The applicable interest rate uses the November rate preceding the calendar year in which the participant's annuity starting date occurs.
