** The discount segment rates and mortality assumptions are prescribed by the IRC and IRS Regulations.

ACTUARIAL ASSUMPTIONS (Continued)

Actuarial Methods

Actuarial Cost Method	The actuarial cost method used to determine the actuarial Target Liability and Target Normal Cost is the Unit Credit Actuarial Cost Method, as required under IRC Section 430. The actuarial valuation date is the last day of the plan year.
Asset Valuation Method	Market value of all Trust Investments, plus any accrued but unpaid contributions to the Trust discounted to the Valuation Date.

Other Facts Relevant to the Valuation of This Plan

Employee Data	An employee census as of the Valuation Date was supplied by the Company and included all employees in the Eligible Class. We did not audit the census.
Asset Data	Asset data as of the Valuation Date and contribution amounts and dates were supplied by the Company. We did not audit the asset data.
Changes in Actuarial Assumption or Methods	The valuation interest rates are the rates required per IRC Section 430, and the cash balance interest credit rate is 2.4% for all plan years. The mortality assumptions used are those mandated by the Internal Revenue Service for this valuation, per IRC Section 430. Because this plan has fewer than 500 participants, we use the unisex assumptions.
Events and Trends Which Have Not Been Taken into Consideration	To the best of our knowledge, there has been no event or trend which has not been taken into consideration and which may require a material change in plan costs or required contribution rates. In addition, no Plan amendments adopted and effective after the valuation date of December 31, 2022 were considered for this Valuation, nor do any exist of which we are aware except statutory CPI increases in maximum benefits and considered compensation.
