Deferred vested benefit: Later of age 65 or termination of employment.

Disability benefit: Immediately upon disablement.

Retirement benefit: Upon termination of employment.

Percent Married and Spouse Age

For purposes of valuing the pre-retirement surviving spouse's benefit, 65% of eligible participants are assumed to be married.

Wives are assumed to be 3 years younger than husbands.

Schedule SB, Part V – Summary of Actuarial Assumptions and Methods

B. Assumptions Rationale

Valuation Interest Rates (for Funding Purposes)	The interest rate assumptions used are prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Mortality (for Funding Purposes)	The mortality assumption used is in accordance with Treasury Regulations 1.430(h)(3).
Administrative Expenses	For the 2022 plan year, the administrative expense assumption was set to \$0 as Fairbanks Morse did not intend to pay administrative expenses from the Plan trust. This assumption is monitored and will be updated in future valuations, if applicable and as needed.
Retirement and Withdrawal Rates	The assumed retirement and withdrawal rates are consistent with the assumption under the Predecessor Plan (EnPro Industries, Inc. Retirement Program). The rates are based on an experience study conducted in 2014 that covered all hourly and salaried participants at EnPro including the Fairbanks Morse participants. Given the small population and lack of credible experience for Fairbanks Morse participants only, this assumption reflects Fairbanks Morse expectations for future plan experience with periodic monitoring of observed gains and losses caused by retirement and withdrawal different than assumed.
Disability Rates	Given the small population and lack of credible experience for Fairbanks Morse disability occurrence, a national disability incidence table is assumed with periodic monitoring of observed gains and losses caused by disability different than assumed.
Form of Payment	For hourly participants, the assumed form of payment is consistent with the assumption under the Predecessor Plan (EnPro Industries, Inc. Retirement Program). Given the lump sum option is payable if the Plan benefit is less than \$100,000, the form of payment assumption reflects a portion of salaried participants will elect a lump sum as many are close to retirement with very few years of Plan accruals. Other annuity forms of payment are actuarially equivalent to the normal form.
Salary Scale	The assumed increases are based on management's best estimate of future salary increases.
Percent Married and Spouse Age	The percent married and spouse age assumptions are consistent with the assumption under the Predecessor Plan (EnPro Industries, Inc. Retirement Program). The assumptions are based on general population statistics on the marital status and age differences for individuals at retirement age.
Inflation for Compensation Limit and Maximum Benefit	N/A - All benefits and pay for any calendar year may not exceed the maximum limitations for that year as defined in the Internal Revenue Code. The Plan provides for increasing the dollar limits automatically as such changes take effect. Increases in the dollar limits are assumed for determining pension cost but are not assumed for funding.

Schedule SB, Part V – Summary of Actuarial Assumptions and Methods

C. Actuarial Methods for Funding Purposes

Minimum Funding Methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The Plan's valuation date is the beginning of the year.
- An individual's funding target is the present value of the future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's target normal cost is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The Plan's target normal cost is the sum of the individual target normal costs, and the Plan's funding target is the sum of the individual funding targets for all participants under the Plan.

Maximum Deductible Contribution Method

Calculations of maximum deductible contributions include the excess of the funding target computed using the projected unit credit method over the minimum funding target. The objective of the projected unit credit method is to fund each participant's benefits under the plan as they accrue, taking into consideration expected future compensation increases. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- An individual's projected funding target is the present value of benefits based on credited service as of the beginning of the plan year and projected compensation that would be used in the calculation of the benefit on each expected separation date. If multiple decrements are used, the projected funding target for an individual is the sum of the component projected funding targets associated with the various anticipated separation dates.
- The Plan's projected funding target is the sum of the projected funding targets for all participants of the Plan. The excess of the Plan's projected funding target over the Plan's funding target is included in the cushion amount.

Schedule SB, Part V – Summary of Actuarial Assumptions and Methods

Asset and Liability Methods

We used financial data submitted by Fairbanks Morse as of January 1, 2022 without further audit. Customarily, this information would not be verified by a plan's actuary. We have reviewed the data for internal consistency and we have no reason to doubt its substantial accuracy.

The asset valuation method used as of January 1, 2022 is the market value of assets, including receivable contributions.

We have used and evaluated actuarial models in accordance with Actuarial Standards of Practice ("ASOP") No. 56. PwC uses the ProVal valuation system developed by Winklevoss Technologies, LLC in performing valuations of pension benefit plans. We have utilized the ProVal software to prepare the valuation results presented herein. ProVal is used to value participant data through projecting retirement benefits and applying plan specific assumptions, methods and plan provisions under applicable accounting and funding standards. PwC is not aware of any material limitations or known weaknesses in the ProVal software.

Participant Methods

Participants or former participants are included or excluded from the valuation as described below:

Participants included: The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.

Participants excluded: No participants are excluded from the valuation.

Insurance contracts: The plan does not have any insurance contracts.

Schedule SB, Part V – Summary of Actuarial Assumptions and Methods

D. Assessment of Risk Associated with Measurement of Plan Obligations and Contributions

In accordance with Actuarial Standard of Practice No. 51 we have assessed the following risks related to the measurement of the Plan's obligations and determination of contributions:

- Investment risk
- Interest rate risk
- Asset / Liability mismatch risk
- Longevity and other demographic risks
- Contribution risk

January 21, 2020 was the effective date of the Plan, and the first contributions were made to the Plan in fiscal year 2021. The Plan's investments are governed by an investment policy set by Fairbanks Morse and executed by Fairbanks Morse investment advisors. While there is investment risk, the Plan's funding policy is to contribute amounts to fully fund the Plan's minimum required contribution, and to maintain adequate funding levels to avoid benefit restrictions and an at-risk plan status.

Funding valuations under ERISA are required to determine plan liabilities using interest rates based on investment-grade corporate bonds. The Plan's funding target is determined based on the 24-month average of segment rates, adjusted for the corridor around the 25-year average of segment rates under the American Rescue Plan Act (ARPA) of 2021.

The interest rates used to determine the PBGC liability are not affected by the 25-year corridor.

Future changes in the mandated interest rates will impact the asset/liability mismatch, minimum required contributions and PBGC variable rate premiums.

Due to the nature of the plan and actual plan experience, there is no significant demographic risk associated with disability. Retirement and withdrawal patterns can result in some risk to the extent more active participants than assumed become eligible for unreduced benefits under the plan formula.

The Plan is a traditional defined benefit plan and subject to longevity risks. Funding valuations under ERISA are required to determine plan liabilities using specified mortality tables and mortality improvement scales. The required mortality tables and mortality improvement scales are tables that were recently published by the Society of Actuaries and reflect recent trends in mortality and future mortality improvement expectations. Nevertheless, there is risk associated with Plan participants and beneficiaries living longer than expected.

The Plan's funding policy is to continue funding at a level necessary to keep the plan adequately funded in compliance with the minimum funding requirements imposed by law. The contribution risk is if the minimum required contribution is not contributed for a given year. For the 2022 plan year, contributions were made in excess of the minimum required contribution.

Eligibility for Benefits (cont).

Disablement

Salaried: A participant becomes totally and permanently disabled if he or she is eligible for and continuously receiving disability benefits under any company-sponsored long-term disability plan or under the Social Security Act.

Preretirement Death

Death while eligible for normal, early, postponed, or deferred vested retirement benefits, with a surviving spouse.

Benefits Paid Upon the Following Events

Normal Retirement

The monthly pension benefit determined as of NRD.

Early Retirement

Hourly: The benefit is unreduced if taken at age 62. Effective January 1, 2021, there is a 4% reduction for each year the Plan benefit commences prior to age 62.

Salaried: There is a 5% reduction for each year the Plan benefit commences prior to age 65.

Postponed Retirement

The monthly pension benefit determined as of the actual retirement date.

Deferred Vested Termination

The benefit accrued at the date of termination is payable at normal retirement age or in a reduced amount at early retirement age (age 55).

Disablement

Hourly: If less than age 65, the participant will receive the pension accrued to the date of disability with a minimum of \$750 per month.

Upon attainment of age 65, the participant will receive the accrued pension benefit as of the date of disability.
