SUMMARY OF ASSUMPTIONS

Funding Discount Rates IRS-Prescribed Three-Segment Rates, for the fourth month prior to the valuation date (September).

	Non-Stabilized	Limited to 25-Year Corridor and 5% Floor
Segment 1:	1.07%	4.75%
Segment 2:	2.68%	5.18%
Segment 3:	3.36%	5.92%

The "Limited to 25 Year Corridor and 5% Floor" rates are adjusted by the applicable maximum and applicable minimum percentages of the 25-year average segment rates, with a 5% floor, as set forth in the American Rescue Plan Act of 2021 ('ARPA-21') for use in Minimum Required Contribution calculations. The IRS Maximum Deductible Limit Calculations use the rates from the "Non-Stabilized" column above.

The interest rates used to value the Target Liability for determining the minimum and maximum contributions are prescribed by law and based on elections made by the Plan Sponsor.

Effective Interest Rate The Effective Interest Rate (EIR) for the current Plan Year is 5.29%. For the prior Plan Year, the EIR was 5.47%.

The EIR is the single rate of interest which, if used to determine the Funding Target, would equal the Funding Target determined using the Plan Sponsor's above elected discount rates. The EIR is used to discount contributions for minimum funding requirements and to accumulate excess contributions to the end of the year.

Expected Return on Assets Not applicable for funding calculation purposes.

Rationale: A smoothing method is not used to calculate the Actuarial Value of Assets; therefore, the Expected Return on Assets is not used.

Administrative Expenses \$6,579 estimated to be paid from the trust in the current Plan Year and included in the Normal Cost.

Administrative expenses are assumed to equal the prior year's actual administrative expenses.

Salary Scale Not applicable.

Rationale: The Plan is frozen.

Inflation

Not applicable.

Rationale: This assumption affects long-term assumed increases in the Social Security Taxable Wage base and the IRS Compensation Limits. Because the Plan is frozen and there are no benefits over the IRS Compensation Limits, this assumption is not applicable.

Mortality

Healthy Participants - IRS §430(h) Optional Combined Static Annuitant / Non-Annuitant Mortality Tables for the Current Plan Year. These tables, when used to determine the present value of an annuity, approximate the present value that would be determined using the Society of Actuaries' (SOA) RP-2014 separate employee and healthy annuitant generational mortality tables, adjusted to 2006, then projected forward using generational projection scale MP-2020, for males and females.

Disabled Participants - Not applicable. There are no disabled participants and Disability Incidence is not assumed.

The mortality assumptions used to value the Target Liability for determining the minimum and maximum contributions are prescribed by law and based on elections made by the Plan Sponsor.

Withdrawal Rates

None assumed.

Rationale: All current active participants have met the service requirements for early retirement eligibility (5 Years of Service). Given this fact, and the small plan size, all active participants are assumed to remain employed until their Normal Retirement Age.

Disability Incidence

None assumed.

Rationale: Given the small number of active participants in the Plan, no Disability Incidence is assumed.

Retirement Rates

Participants are assumed to retire from active employment in accordance with annual rates varying by age. Sample rates are as follows:

Age	Rates
55	4.00%
56	4.00%
57	4.00%
58	10.00%
59	10.00%
60	10.00%
61	10.00%
62	10.00%
63	55.00%
64	55.00%
65	100.00%

Rationale: The retirement rates assumed are expected to represent the average retirements based on a review of recent actual retirement experience.

Spousal Assumptions

80% of males and 50% of females are assumed to be married.

Females are assumed to be 4 years younger than males.

Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to spousal information, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.

Benefit Commencement Age

Normal Retirement Age, or valuation age, if later.

Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to Benefit Commencement Age, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.

Form of Payment

All benefits are assumed to be paid in the Normal Form defined under the terms of the Plan.

Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to Form of Payment, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.

Changes in funding assumptions since the prior valuation

In accordance with federal law, the discount rates for funding and PBGC purposes were updated from the discount rates disclosed in the 2021 Actuarial Valuation Report to the discount rates shown above.

The funding mortality table was changed from the IRS 2021 Static Mortality Table to the IRS 2022 Static Mortality Table.

SUMMARY OF METHODS

Minimum Funding Cost Method

The actuarial cost method used to determine the liabilities for minimum funding calculations is the Traditional Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for each participant. The individual accrued liability for a participant is the present value of the accrued benefit as of the valuation date taking into account service and/or pay as of the valuation date. The individual normal cost for a participant is the present value of the benefit expected to accrue in the plan year being valued.

If a plan is frozen, there is no normal cost attributable to benefit accruals.

Maximum Deductible Contribution Method

The actuarial cost method used to determine the liabilities for maximum deductible calculations is the Projected Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue, taking into consideration expected future compensation increases. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for all participant. The individual accrued liability for a participant is the sum of 1) the present value of the accrued benefit earned as of the valuation date taking into account service and/or pay as of the valuation date; plus 2) the present value of the accrued benefit expected to be earned because of any expected future compensation increases.

The individual normal cost for a participant is the sum of the present value of the benefit expected to accrue in the plan year being valued taking into account any expected future compensation increases.

Asset Method

We used financial data submitted by the trustee as of the valuation date without further audit. We have reviewed the information for internal consistency, and we have no reason to doubt its substantial accuracy.

Actuarial Value of Assets

For funding purposes, the Actuarial Value of Assets is equal to the Market Value of Assets.

Receivable contributions are discounted back to the valuation date at the prior year's effective interest rate.

**Changes in methods since
the prior valuation** None.
