Pension Plan for Employees of the National Bank of Petersburg

SUMMARY OF ACTUARIAL METHODS AND ASSUMPTIONS

Changes to the actuarial methods and assumptions from the prior valuation report include the following:

COST METHOD

In accordance with PPA, the annual cost is equal to the target normal cost plus the shortfall amortization charge minus any prefunding and carryover balances.

Unit Credit method. The normal cost is the sum of the individual normal costs for active participants. The normal cost for an individual is the present value, as of the valuation date, of the participant's retirement, death, and withdrawal benefits which he is expected to accrue during the current plan year.

The actuarial accrued liability is the sum of the individual present values, for all participants, of the benefits accrued, based on service to the valuation date.

The actuarial liabilities shown in this report are determined using software purchased from an outside vendor which was developed for this purpose. Certain information is entered into this model in order to generate the liabilities specific to your pension plan. These inputs include economic and non-economic assumptions, plan provisions and census information. We rely on the coding within the software to value the liabilities using the actuarial methods and assumptions selected. Both the input to and the output from the model is checked for accuracy and reviewed for reasonableness.

ACTUARIAL ASSUMPTIONS

Interest Rate (as prescribed by PPA and modified by MAP-21, HATFA, BBA and ARPA)

Without Adjusted Interest Rates:

Liabilities are valued using the three segment rates based on the 24-month average of the corporate bond yield curve published by the Secretary of the Treasury for the applicable month of March 2022.

With Adjusted Interest Rates:

The Plan Sponsor has elected to implement the interest rate provisions provided in the American Rescue Plan Act of 2021 effective with the 2021 Plan Year for both IRS minimum funding and AFTAP benefit restriction purposes. The interest rates are the adjusted 24-month segment rates using 25-year average segment rate corridors under MAP-21, further adjusted by HATFA/BBA/ARPA permissible corridors for the plan year beginning in 2022.

PBGC Premiums:

The Plan Sponsor is using the Standard Method to determine the Variable Rate Premium.

ASSET VALUATION

Current market value of plan assets as reported by the trustee, plus accrued contributions.

Expected Return on Assets for IRC 430, for FASB ASC 960: 6.25%
