Assumptions prescribed by law

<b>Mortality</b>	<b>During benefit payment period</b> IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.
	<b>Before benefit payment period</b> IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.

Assumptions selected by actuary

<b>Inflation</b>	2.40% increase per year.  Our long-term inflation assumption considered the current economic environment, recent and historical data, and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office, and Survey of Professional Forecasters. See Long-Term Capital Market Assumptions link.
<b>Asset return</b>	5.50% for the current plan year.  The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.
<b>Expected expense</b>	The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets, with an updated estimate of PBGC premiums. This is the best estimate available of upcoming year's expenses.
<b>Retirement</b>	Active and inactive participants are assumed to retire at normal retirement age as defined in <u>Plan provisions</u> .  This assumption is based on the results of recent experience analysis and anticipated future experience.
<b>Disability</b>	None.  We do not have a disability assumption since there are no active participants in the plan.
<b>Marriage</b>	75% married; husbands are 3 years older than wives.  This assumption does not have material impact on the results of this report and has been selected based on our best estimate of active workforce.
<b>Withdrawal</b>	None.  We do not have a withdrawal assumption since there are no active participants in the plan.

<b>Form of benefit</b>	<p>Participants are assumed to receive their benefits on the normal form at the assumed retirement age.</p> <p>This assumption is based on the results of recent experience analysis and anticipated future experience.</p>
Methods prescribed by law	
<b>Liability measure</b>	<p>Funding target is the present value of the benefits accrued on the valuation date.</p> <p>Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.</p>
<b>Purchased annuities</b>	<p>Plan liabilities do not recognize any additional cost for purchasing annuities; benefits are valued as though paid on a monthly basis from plan assets, per IRS guidance. Although required, this method may not result in the plan accumulating adequate assets and you may wish to consider additional contributions.</p>
Methods selected by plan sponsor	
<b>Asset method</b>	<p>The asset valuation method is prescribed by law for plans that elect to use a value other than market value.</p> <p>For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.</p> <p>The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.</p> <p>When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.</p>
<b>Segment rates</b>	<p>24-month average with no weighting to prior law basis. Use rates where February is the last month included in the average.</p>
<b>PBGC premium basis</b>	<p>Variable rate premiums are calculated using census, market value of assets and interest rates in effect on the current valuation date. Interest rates are the 24-month average rates used for annual cost but without the interest rate corridor defined in IRC §430(h)(2)(C)(iv). You elected this Alternative interest method for the 07/01/2009 plan year and this method must be used for five years before a change can be made.</p>

Methods elected by actuary

**Vested benefits**

A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.

The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan's regular funding target and target normal cost.

**Mortality**

Based on Pri-2012 Blue collar base rate mortality table projected generationally using the using the Principal Mortality Improvement Scale (Principal 2022).

**Mortality base rates**

**Before benefit payment period**

Employee amount-weighted, male and female

**During benefit payment period**

Retiree amount-weighted, male and female

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The Blue collar base rate table was selected based on information provided by the plan sponsor.

Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe "Approach 1" is reasonable for this plan.

**Mortality improvement** Principal 2022 MI scale is based on MIM-2021-v3 application tool issued by SOA in October 2022 with the following parameters:

Parameter	Principal 2022
Historical dataset	SSA
Whittaker-Henderson Graduation	Order 3
Interpolation Structure	Basic
Graduated MI data last year ("jumping off" point)	2017
H/D transition ultimate year by age/cohort	2028/2028

**Interest rate used to value liabilities** 5.00%

The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.

**Treatment of administrative expenses** No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception - contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

**Form of benefit and basis**

For all participants, an annuity is purchased on the normal form at the assumed retirement age

**Interest rate**

3.25%. Annuities are purchased at market rates when participants retire. Annuity purchase interest rates are usually between treasury bond yield and high-quality corporate bond yields. Historically, annuity purchase rates for retirees are approximately 10-year Treasury bond plus a spread of 25 basis points. The long-term expectation of 10-year Treasury bond yield is 3.00% (see our Principal RAS Long-Term Capital Market Assumptions (CMA) Nov 2022). The selection of 3.25% is a reasonable rate for the long-term annuity purchase.

**Mortality**

Based on 1983 Group Annuity Mortality male table, setback 0 years for males and 6 years for females projected with Scale H to 1984.
