Assumptions prescribed by law

Mortality	<u>During benefit payment period</u> IRS Prescribed Mortality - Static Annuitant, male and female.
	<u>Before benefit payment period</u> IRS Prescribed Mortality - Static Non-annuitant, male and female.

Assumptions selected by actuary

Inflation	2.40% increase per year.
	Our long-term inflation assumption considered the current economic environment, recent and historical data and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office and Survey of Professional Forecasters. See Long-Term Capital Markets Assumptions November 2022.
Asset return	6.25% for the current plan year.
	The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. See Long-Term Capital Markets Assumptions November 2022.
Expected expense	The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets. This is the best estimate available of upcoming year's expenses.
Retirement	Active and inactive participants are assumed to retire at normal retirement age as defined in Plan provisions. This assumption is reasonable with the plan's design.
Upcoming year salary increase	The preceding year's salary is increased by 4.50% at each age.
	Note: Not used for Plan accounting calculations. We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the plan sponsor and used by the prior actuary. As we gain plan experience, we will monitor and make appropriate adjustments in the future.
Disability	None.
	This plan does not offer a subsidized disability benefit.
Marriage	100% married; husbands are 3 years older than wives.
	This assumption does not have material impact on the results of this report and has been selected based on the assumption set by the prior actuary.

Withdrawal	<p>None.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. As we gain plan experience, we will monitor and make appropriate adjustments in the future.</p>
Wage base increase	<p>3.50% per year.</p> <p>Our Wage Base increase assumption are based on inflation and the real wage differential forecast from Social Security Trustee Report. Based on average annual real wage growth forecast from the Social Security Trustee report and historical averages, our best estimate places this assumption to 1.10% above inflation of 2.40%.</p>
Compensation limit increase	<p>2.40% increase per year used in the calculation of the IRC 404 maximum deduction cushion. See Calculated deduction in Rules and regulations. Compensation limit increase is consistent with the inflation assumption.</p>
Form of benefit and basis	<p>100% of active participants are assumed to receive benefits as a single lump sum payable immediately for retirement benefits. The inactive participants will elect a monthly annuity on the normal form at the assumed retirement age.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. This assumption is reasonable with the plan's design. As we gain plan experience, we will monitor and make appropriate adjustments in the future.</p>
Methods prescribed by law	
Liability measure	<p>Funding target is the present value of the benefits accrued on the valuation date.</p> <p>Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.</p>
Lump sum payments	<p>Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance. These rates are currently higher than the actual rates used to determine lump sum distributions; therefore, plan liabilities do not currently recognize this additional cost and this may result in the plan not accumulating adequate assets. You may wish to consider additional contributions.</p>

HCE benefit payment restrictions A ratio of the plan assets and accrued liability is used to determine if restrictions apply. Assets and accrued liability are as of the valuation date and are reduced by:

- any retiree benefit index or floor
- amounts for HCEs who were previously restricted
- an amount for the retiring HCE

The estimated HCE ratio illustrated in this report is based on the market value of plan assets (excluding late deposits) and funding target as of the valuation date. The funding target uses the non-stabilized interest rates as defined in IRC §430(h)(2)(C)(iv). Other assumptions or methods could be used.

Methods selected by plan sponsor

Asset method Market value.

Segment rates 24-month average with no weighting to prior law basis. Use rates where April is the last month included in the average.

PBGC premium basis Variable rate premiums are calculated using census, market value of assets and the one-month average of corporate bond rates in effect on the valuation date. You elected this standard interest method for the 05/01/2022 plan year, and the method must be used for five years before a change can be made.

Segment 1	Segment 2	Segment 3
years 0-5	years 5-20	years 20+
3.00%	4.22%	4.17%

Methods elected by actuary

Retirees Assets and liabilities for current and future retirees are included.

Vested benefits A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.

The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post-retirement death benefits for non-retired participants except as noted in the Plan provisions.

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan's regular funding target and target normal cost.

Mortality	Based on Pri-2012 blue-collar base rate mortality table projected generationally using MP-2021.
Mortality base rates	<p>During benefit payment period Retiree amount-weighted, male and female</p> <p>Before benefit payment period Employee amount-weighted, male and female</p> <p>The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The blue-collar base rate table was selected based on information provided by the plan sponsor.</p> <p>Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe "Approach 3" is reasonable for this plan.</p>
Mortality improvement	<p>MP-2021 is the most recent improvement scale published by the SOA in October 2021.</p> <p>In selecting this assumption, we considered the other parameters available in the MIM-2021-v3 application tool issued by the SOA in October 2022 and consider the selections in MP-2021 reasonable. Based on the sponsor's input, plan experience does not show a need for long-term excess death or COVID death load adjustments.</p>
Interest rate used to value liabilities	<p>5.75%</p> <p>The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation and then converted to the geometric under lognormal distribution assumption. See Long-Term Capital Markets Assumptions November 2022.</p>

Treatment of administrative expenses

No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan would usually be reimbursed annually through required funding except when contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

Basis for lump sums

Interest rate

Based on the three segment yield curve: 3.05%, 3.45% and 4.35%

The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high-quality corporate bond yields. According to our most recent study, the long-term expected yields for short, intermediate and long corporate bonds are 3.05%, 3.45% and 4.35%. For details, see Corporate AA yield in Table or Figure 2 of Long-Term Capital Market Assumptions link.

Mortality

We have selected the same mortality assumption for lump sum payments but with a 50/50 blend of male and female total dataset base rates and mortality improvement scales. This reflects the IRS practice of defining lump sum mortality on a unisex basis.
