Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
Employee Retirement Plan of Summit Federal Savings Bank
EIN 22-1368780 Plan No. 011

Assumptions prescribed by law

Mortality	During benefit payment period IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.
	Before benefit payment period IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.

Assumptions selected by actuary

Inflation	2.40% increase per year. Our long-term inflation assumption considered the current economic environment, recent and historical data, and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office, and Survey of Professional Forecasters. See Long-Term Capital Market Assumptions link.
Asset return	6.00% for the current plan year. The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.
Expected expense	The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets. This is the best estimate available of upcoming year's expenses.
Retirement	Active and inactive participants are assumed to retire at normal retirement age as defined in Plan provisions . This assumption is based on the results of recent experience analysis and anticipated future experience.
Disability	None. Due to the size of the plan and limited experience, we're not recognizing a disability assumption.
Marriage	75% married; husbands are 3 years older than wives. This assumption does not have material impact on the results of this report and has been selected based on our best estimate of active workforce.
Withdrawal	None. Due to the size of the plan and limited experience, we're not recognizing a withdrawal assumption prior to retirement.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
Employee Retirement Plan of Summit Federal Savings Bank
EIN 22-1368780 Plan No. 011

Form of benefit and basis	<p>100% of active participants will elect a benefit paid in a lump sum at the assumed retirement age.</p> <p>Active participants who terminate before the earliest assumed retirement age are assumed to receive a single sum immediately. Participants who are already terminated on the valuation date are assumed to receive their benefit on the normal form at the assumed retirement age.</p> <p>This assumption is based on the results of recent experience analysis and anticipated future experience.</p> <p>The lump sum benefit is based on the Applicable Mortality and the plan's funding target interest rates, as prescribed.</p>
Methods prescribed by law	
Liability measure	<p>Funding target is the present value of the benefits accrued on the valuation date.</p> <p>Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.</p>
Lump sum payments	<p>Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance. These rates are currently higher than the actual rates used to determine lump sum distributions. Therefore, plan liabilities do not currently recognize this additional cost and this may result in the plan not accumulating adequate assets. You may wish to consider additional contributions.</p>
Methods selected by plan sponsor	
Asset method	<p>The asset valuation method is prescribed by law for plans that elect to use a value other than market value.</p> <p>For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.</p> <p>The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.</p> <p>When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.</p>
Segment rates	<p>24-month average with no weighting to prior law basis. Use rates where February is the last month included in the average.</p>

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
Employee Retirement Plan of Summit Federal Savings Bank
EIN 22-1368780 Plan No. 011

PBGC premium basis	Your plan is a small plan as defined by PBGC. Variable rate premiums are calculated using census, market value of assets and interest rates in effect on the current valuation date. Interest rates are the one-month average of corporate bond rates. You elected this Standard interest rate method for the 07/01/2022 plan year and the method must be used for five years before a change can be made.
Methods elected by actuary	
Retirees	Assets and liabilities for current and future retirees are included.
Vested benefits	<p>A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.</p> <p>The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.</p>

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The Total dataset base rate table was selected based on information provided by the plan sponsor.

Mortality improvement Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe "Approach 1" is reasonable for this plan.

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods
 Employee Retirement Plan of Summit Federal Savings Bank
 EIN 22-1368780 Plan No. 011

Interest rate used to value liabilities	<p>5.50%</p> <p>The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.</p>						
Treatment of administrative expenses	<p>No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.</p> <p>Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.</p> <p>Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.</p>						
Basis for lump sums	<p>Interest rate</p> <p>Based on the three segment yield curve: 3.05%/3.45%/4.35%</p> <p>The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high quality corporate bond yields. According to our most recent study, the long-term expected yields for short/intermediate/long corporate bonds are 3.05%/3.45%/4.35%. For details, see Corporate AA yield in Table or Figure 2 of Long-Term Capital Market Assumptions link.</p> <p>Mortality</p> <p>We have selected the same <u>mortality</u> assumption for lump sum payments, but with a 50/50 blend of male and female total dataset base rates and mortality improvement scales. This reflects the IRS practice of defining lump sum mortality on a unisex basis.</p>						
Assumptions used in the forecast of funded status and annual cost
