Models Used

The results in this report are based on an actuarial valuation model with three components as outlined in Actuarial Standard of Practice No. 56 - Modeling (ASOP 56):

1. Information inputs including the data, assumptions, methods, and plan provisions outlined in this report,
2. Processing by ProVal[®] actuarial software, and
3. Our report template which translates the ProVal[®] output into valuation results.

The model is intended to convert the information input above to usable actuarial valuation results. We have reviewed the software's output for reasonableness, and have independently checked sample one-person output where appropriate, but have otherwise relied on it.

Other models used in this actuarial valuation include:

- Expected investment return model based on the Horizon Actuarial Services 2022 Survey of Capital Market Assumptions and the fund's asset allocation

Models Used

The results in this report are based on an actuarial valuation model with three components as outlined in Actuarial Standard of Practice No. 56 - Modeling (ASOP 56):

1. Information inputs including the data, assumptions, methods, and plan provisions outlined in this report,
2. Processing by ProVal[®] actuarial software, and
3. Our report template which translates the ProVal[®] output into valuation results.

The model is intended to convert the information input above to usable actuarial valuation results. We have reviewed the software's output for reasonableness, and have independently checked sample one-person output where appropriate, but have otherwise relied on it.

Other models used in this actuarial valuation include:

- Expected investment return model based on the Horizon Actuarial Services 2022 Survey of Capital Market Assumptions and the fund's asset allocation
