Schedule SB, Part V Statement of Actuarial Assumptions/Methods

Economic Assumptions

Interest rate basis

- Applicable month September
- Interest rate basis 3-Segment Rates

Interest rates

	Reflecting Stabilization	Not Reflecting Stabilization
• First segment rate	4.75%	1.41%
• Second segment rate	5.00%	3.09%
• Third segment rate	5.74%	3.58%
• Effective interest rate	5.13%	3.06%

As permitted by law, rates reflecting stabilization are used to determine the funding target and thus the minimum required contribution under IRC §430 for the plan. Because these assumptions are subject to a corridor based on average interest rates over a 25-year period, they may differ from (and currently are higher than) current market interest rates and may be inconsistent with other economic assumptions used in the valuation.

Annual rates of increase

- Compensation: N/A
- Future Social Security wage bases N/A
- Statutory limits on compensation N/A

Assumed cost of living adjustments None.

Plan-related expenses Administrative expenses paid from the trust for the valuation year are assumed to equal actual expenses paid during the prior twelve months, rounded to the nearest thousand.

At-risk assumptions For at-risk calculations (when applicable), all participants eligible to elect benefits during the current and subsequent ten plan years are assumed to commence benefits at the earliest possible date under the plan, but not before the end of the current plan year, except in accordance with the regular valuation assumptions. In addition, all participants (not just those eligible to begin benefits within the next 11 years) are assumed to elect the most valuable form of benefit under the plan

Timing of benefit payments Annuity payments are payable monthly at the beginning of the month and lump sum payments are payable on date of decrement.

Methods

Valuation date First day of plan year

Funding target Present value of accrued benefits as required by regulations under IRC §430.

Target normal cost Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.

Decrement timing The approach used is called rounded middle of year (rounded MOY) decrement timing. Most events are assumed to occur at the middle of year during which the eligibility condition will be met or the start/end date will occur. For death and disability decrements, the rate applied is based on the participant's rounded age (nearest integer age) at the beginning of the year, to align with the methodology generally used to create those rate tables. For retirement and withdrawal decrements: the age is generally the participant's rounded age at the middle of the year.

Actuarial value of assets The actuarial value of assets is equal to the market value of assets as of the valuation date plus the discounted present value of contributions made after the valuation date for the prior plan year, discounted using the effective interest rate for the prior plan year.

Tax policy The actuarial valuation performed for the plan year ending December 31, 2023 is used to determine the maximum deductible contribution for the tax year ending December 31, 2023.

Benefits not valued

The Pre-Retirement Survivor Benefit is not valued for Vested Terminated Participants. To cover the cost of such benefit the pension for Vested Terminated Participants is reduced.

Valuation of deferred vested participants past normal retirement age

The valuation approach for deferred vested participants over age 65 varies depending on the available information. If the participant is known to have commenced payment during the valuation year, the commencement date and benefit amount are reflected in the valuation, along with any lump sum payment of retroactive benefits. If the participant is considered to be located but not known to have commenced, the benefit is valued with an actuarial increase applied from normal retirement age to assumed commencement age one year after the valuation date. If the participant is not located, the liability reflects the combination of an actuarial increase and the probability of survival to the current age and includes the value of retroactive payments.

Sources of Data and Other Information

Alight, the administrator for the Company's plans, furnished terminated vested participant data as of the valuation date. Prudential furnished in-pay participant data. Data and other information were reviewed for reasonableness and consistency, but no audit was performed. Based on discussions with the plan sponsor, assumptions or estimates were made when data were not available. We are not aware of any errors or omissions in the data that would have a significant effect on the results of our calculations. Information on assets, contributions and plan provisions was supplied by the plan sponsor. Asset data were provided by the Company on December 8, 2022. WTW does not receive copies of trust statements.

Assumptions Rationale - Significant Economic Assumptions

Discount rate

The basis chosen was selected by the plan sponsor from among choices prescribed by law and regulation, all of which are based on observed market data over certain periods of time.

Assumptions Rationale - Significant Demographic Assumptions

Healthy mortality

Assumptions used for funding purposes are as prescribed by IRC §430(h).

Prescribed Methods

Funding methods

The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430 or were selected by the plan sponsor from a range of methods permitted by IRC §430.

Changes in Assumptions and Methods

Change in assumptions since prior valuation

The interest rate assumption was updated to reflect annual changes in rates specified by the IRS. However, the underlying PPA election of September segment rates is unchanged. The effective interest rate has changed from 5.29% for 2022 to 5.13% for 2023.

The mortality tables used to calculate the funding target and target normal cost were updated to use the MP-2021 projection scale, as specified in the regulations under IRC §430(h)(3)-1.

Change in methods since prior valuation

There have been no changes in methods since the prior valuation.
